Gyrfalcon, *Falco Rusticolus* L. Carol Snow, 1974 The objective of this report is to provide BLM personnel with the latest and most up to date information on rare or endangered species occurring on the public domain Page 1 The Gyrfalcon Eugene Potapov, Richard Sale, 2010-01-29 This is the first monograph on one of the most beautiful and admired birds in the world The Gyrfalcon is the world s largest and most powerful falcon a truly awe inspiring bird which inhabits the ferociously inhospitable Arctic taiga from Greenland and Iceland right across Siberia and northern Canada *Gyrfalcon* Norman Barichello, 2020-03-13 Gyrfalcons and humans have shared a remarkable relationship since prehistoric times These extraordinary arctic falcons have been revered coveted as an item of commerce persecuted and enjoyed as a spectacle of sport for at least ten thousand years Today climate change has brought new challenges with habitat in the far north changing rapidly as natural cycles begin to break down Drawn from over thirty years of study and observation this in depth study provides a comprehensive view of the gyrfalcon s place in the arctic ecosystem including their inextricable link to their primary pray the ptarmigan and their antagonistic relationship with golden eagles It explores the connection the bird has had with humanity in both legend and practice and the challenges it faces as its habitat continues to change This definitive look at the gyrfalcon shows us both sides of the majestic bird the master of its domain and a threatened species facing an uncertain future *Biology of the Peregrine and Gyrfalcon in Greenland* William A. Burnham, William G. Mattox, 1984 A ten year study began in 1972 in West Greenland to investigate the breeding biology of the peregrine falcon Data on nesting gyrfalcons were also collected Thirty four peregrine nesting sites were examined in the 6050 km² inland study area near Søndre Strømfjord Limited research also centered in Disko Bugt and Frederikshavn Peregrines were found nesting predominantly on high south facing cliffs which overlooked large areas The mean minimum distance between peregrine eyries was 7.7 km for the inland area 1972 and 1973 and 55 km for the coast 1974 Approximately 60 percent of the inland nesting sites were occupied each year A ten year average production of 1.90 young per occupied site and 2.78 young per successful site was determined Lapland longspurs snow buntings wheatears and redpolls comprised 90 percent of the peregrines diet Raven nests and prey availability may be the most significant factor affecting falcon density Addled peregrine eggs eggshell fragments and peregrine prey species were collected Whole eggs averaged 14.3 ppm wet weight 305 ppm lipid weight DDE while eggshell measurements showed a 16 percent thinning compared with pre 1940 eggs from Greenland Prey species carried low levels of DDE The peregrine population appears to be at a near critical contamination level and a small increase in DDE level could contribute to a population decline No indication of a decline has been observed during the study and the population appears stable The project banded 185 peregrines from which 8 recoveries occurred The recoveries suggest peregrines migrate south to winter in South America **Gyrfalcon** Emma Ford, 1999 The gyr is the largest fastest and arguably the most beautiful falcon in the world For centuries man has been driven to acquire live specimens from their Arctic

territory for sport and even as currency This is a study of the species using drawings sketches paintings and photographs The author examines the gyrfalcon s role in natural history its place in literature and its long established use in falconry
