Read this magazine article about choices people may consider if they want to select a tree frog as a pet.

The obvious choices when starting out with tree frogs are the large and **placid** White's tree frog, or maybe the iconic red-eyed tree frog for more experienced keepers. However, if you're looking for something more unusual and yet relatively hardy and straightforward to look after, the American green tree frog is well worth **considering**. Captive-bred specimens of this species can often be obtained through exotic pet retailers or specialist breeders, and make charming and delightful terrarium subjects.

Originating from the sub-tropical climates of the south-eastern United States, extending from North Carolina through to Florida and Louisiana, this is a bold and gregarious little frog that is typically found in areas of ponds, lakes, or in the flood-plain meadows and swamp lands. Slighter and smaller than its European cousin, the American green tree frog is medium-sized, averaging around 3.75 cm in length when fully grown.

It is also a particularly attractive species, usually being a vibrant apple green speckled with tiny white or yellow dots across the back and flanks. The undersides are pale, and a white or cream-coloured lateral band runs from the top jaw along its sides. The colouration of these tree frogs is somewhat changeable, though, and will vary from shades of olive green to deep brown, according to their surroundings and the influence of environmental factors such as heat and humidity.

American tree frogs are mainly nocturnal in nature, meaning they tend to spend most of the day snoozing in their preferred resting spot, hidden amongst the leaves. They then become most active in the evenings and early night-time when they are likely to be heard calling in their **distinctive**, high-pitched and surprisingly loud voices **inflating** their throat pouches as they do so.
