RESPIRATORY SYSTEM

The respiratory system includes all passages that transport air to and from the lungs and the surfaces of the lungs in which gas exchange occurs. Respiration is the entire process by which gases are exchanged between the atmosphere and the body cells. Oxygen, the most important substance, which our lives depend on, is brought into the body from the air and its product, Carbon dioxide is given off when we exhale. Oxygen moves into and out of the lungs as a result of pressure changes brought about by contraction and relaxation of the diaphragm and other breathing muscles. The main respiratory organs are : nose, nasal cavity, sinuses, pharynx, larynx, trachea, bronchial tree, lungs and diaphragm.
