During the past two decades incredible progress has been achieved in the instruments and devices used in the biomedical field. This progress stems from continuous scientific research that has taken advantage of many findings and advances in technology made available by universities and industry. Innovation is the key word and in this context legal protection and intellectual property rights (IPR) are of crucial importance. This book provides students and practitioners with the fundamentals for designing biomedical devices and explains basic design principles. Furthermore, as an aid to the development of devices and products for healthcare, it presents a brief description of the human body covering anatomy and physiology that will assist the reader in understanding the origin of biosignals, their significance, and the technology to be used in their measurement. Issues concerning IPR and protections are also fully discussed with examples and opportunities for IPR exploitation.

Principles of Biomedical Instrumentation Andrew G. Webb, 2018-01-11. This accessible yet in depth textbook describes the step by step processes involved in biomedical device design. Integrating microfabrication techniques, sensors, and digital signal processing with key clinical applications, it covers the measurement, amplification, and digitization of physiological signals and the removal of interfering signals, the transmission of signals from implanted sensors through the body, and the issues surrounding the powering of these sensors networks for transferring sensitive patient data to hospitals for continuous home monitoring systems, tests for ensuring patient safety, the cost benefit and technological trade offs involved in device design, and current challenges in biomedical device design. With dedicated chapters on electrocardiography, digital hearing aids, and mobile health, and including numerous end of chapter homework problems, online solutions, and additional references for extended learning, it is the ideal resource for senior undergraduate students taking courses in biomedical instrumentation and clinical technology.
