Combustion Engine Ansys Mesh Tutorial:

Advances in Internal Combustion Engines and Fuel Technologies Hoon Kiat Ng, 2013-03-20 This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted The central theme here is two fold internal combustion engines and fuel solutions for combustion systems Internal combustion engines remain as the main propulsion system used for ground transportation and the number of successful developments achieved in recent years is as varied as the new design concepts introduced It is therefore timely that key advances in engine technologies are organised appropriately so that the fundamental processes applications insights and identification of future development can be consolidated In the future and across the developed and emerging markets of the world the range of fuels used will significantly increase as biofuels new fossil fuel feedstock and processing methods as well as variations in fuel standards continue to influence all combustion technologies used now and in coming streams This presents a challenge requiring better understanding of how the fuel mix influences the combustion processes in various systems The book allows extremes of the theme to be covered in a simple yet progressive way

Numerical Simulation of Rotary Sliding Vane Pumps Mohammed Akmal

Ammar, A pump is a mechanical device that converts mechanical energy into hydraulic energy The aim of the current work is to examine the behavior of fluid flow inside a rotary sliding vane pump and assessing the performance by studying the effect of change of the rotational speed number of vanes and the radial clearance gap size between vane tips and stator surface on the performance of the pump The commercial finite volume solver ANSYS Fluent was used to build a 3D model of the pump and simulate the flow behavior in it with an additional C language source code for the description of the dynamic mesh motion Pump flow was studied using lubricating oil 5W 30 as the working fluid Several computational configurations were used for the numerical simulation
