In Zero to One, legendary entrepreneur and investor Peter Thiel shows how we can find singular ways to create those new things.Thiel begins with the contrarian premise that we live in an age of technological stagnation, even if we’retoo distracted by shiny mobile devices to notice. Information technology has improved rapidly, but there is no reason why progress should be limited to computers or Silicon Valley. Progress can be achieved in any industry or area of business. It comes from the most important skill that every leader must master: learning to think for yourself.Doing what someone else already knows how to do takes the world from 1 to n, adding more of something familiar. But when you do something new, you go from 0 to 1. The next Bill Gates will not build an operating system. The next Larry Page or Sergey Brin won’tmake a search engine. Tomorrow’schampions will not win by competing ruthlessly in today’smarketplace. They will escape competition altogether, because their businesses will be unique.Zero to One presents at once an optimistic view of the future of progress in America and a new way of thinking about innovation: it starts by learning to ask the questions that lead you to find value in unexpected places.

Inside this Instaread Summary: Overview of the entire book, Introduction to the important people in the book, Summary and analysis of all the chapters in the book, Key Takeaways of the book, A Reader's Perspective, Preview of this summary.

Chapter 1: Progress is the goal of the future. Horizontal and vertical are the two kinds of progress. Horizontal progress means more of what is currently working. Another word for horizontal progress is globalization: the act of taking a product and integrating it world-wide. Vertical progress comes from doing new things that have not been done before. Technology: the new and better way of doing something is another word for vertical progress. In terms of the world's future, technology matters more than globalization. New technology generally comes from startups. These small groups of people with a mission have improved the world one new idea at a time. Big organizations are bureaucracies that move too slowly. Individuals alone cannot develop new ideas. New thinking is a new company's strongest characteristic.

Chapter 2: When a person can recognize a popular belief that is delusional, that person can find the truth that few believe behind it. Traditional beliefs are seen as wrong only in retrospect. Although the 1990s are remembered as being a prosperous decade, they were actually a time when the old economy could not withstand the challenges of globalization. The internet boom and bust at the end of the decade was intense but lasted only eighteen months. The most successful companies had what seemed to be an anti-business model where they lost money as they got larger. This is why the mania could not be sustained. At this time, globalization replaced technology as the best hope for the future. Entrepreneurs who stayed in business after the dot-com bust identified four lessons that act as general rules for the business world today. The first is that small steps forward are the only safe path. The second is to remain flexible and lean. The third is to improve products already being made by successful competitors. The fourth is to focus primarily on the product. The opposite of these four rules are actually better principles for startup companies to follow: Risk, being bold, having a plan, competition, destroying profits, and sales are as important as the product.
