Finite Difference Computing with PDEs Hans Petter Langtangen,Svein Linge,2017-06-21 This book is open access under a CC BY 4 0 license This easy to read book introduces the basics of solving partial differential equations by means of finite difference methods Unlike many of the traditional academic works on the topic this book was written for practitioners Accordingly it especially addresses the construction of finite difference schemes formulation and implementation of algorithms verification of implementations analyses of physical behavior as implied by the numerical solutions and how to apply the methods and software to solve problems in the fields of physics and biology *Programming for Computations - MATLAB/Octave* Svein Linge,Hans Petter Langtangen,2016-08-01

This book presents computer programming as a key method for solving mathematical problems There are two versions of the book one for MATLAB and one for Python The book was inspired by the Springer book TCSE 6 A Primer on Scientific Programming with Python by Langtangen but the style is more accessible and concise in keeping with the needs of engineering students The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows the students to write simple programs for solving common mathematical problems with numerical methods in engineering and science courses The emphasis is on generic algorithms clean design of programs use of functions and automatic tests for verification

Programming for Computations - Python Svein Linge,Hans Petter Langtangen,2019-10-30 This book is published open access under a CC BY 4 0 license This book presents computer programming as a key method for solving mathematical

problems This second edition of the well received book has been extensively revised All code is now written in Python version 3.6 no longer version 2.7 In addition the two first chapters of the previous edition have been extended and split up into five new chapters thus expanding the introduction to programming from 50 to 150 pages Throughout the book the explanations provided are now more detailed previous examples have been modified and new sections examples and exercises have been added Also a number of small errors have been corrected The book was inspired by the Springer book TCSE 6 A Primer on Scientific Programming with Python by Langtangen but the style employed is more accessible and concise in keeping with the needs of engineering students The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows students to write simple programs for solving common mathematical problems with numerical methods in the context of engineering and science courses The emphasis is on generic algorithms clean program design the use of functions and automatic tests for verification

Modeling Nonlinear Dynamics from Equations and Data—with Applications to Solids, Fluids, and Controls George Haller, 2025-05-20 This concise text presents an introduction to the emerging area of reducing complex nonlinear differential equations or time resolved data sets to spectral submanifolds SSMs SSMs are ubiquitous low dimensional attracting invariant manifolds that can be constructed systematically building on the spectral properties of the linear part of a nonlinear system The internal dynamics within SSMs then serve as exact low dimensional models with which the full system evolution synchronizes exponentially fast SSM based model reduction has a solid mathematical foundation and hence is guaranteed to deliver accurate and predictive reduced order models under a precise set of assumptions This book introduces the foundations of SSM theory to the novice reader reviews recent extensions of classic SSM results for the advanced reader and illustrates the power of SSM reduction on a large collection of equation and data driven applications in fluid mechanics solid mechanics and control This book is intended for graduate students postdocs faculty and industrial researchers working in model reduction for nonlinear physical systems arising in solid mechanics fluid dynamics and control theory It is appropriate for courses on differential equations modeling dynamical systems and data driven modeling
