**Modeling of Atmospheric Chemistry** Guy P. Brasseur, Daniel J. Jacob, 2017-06-19 Mathematical modeling of atmospheric composition is a formidable scientific and computational challenge This comprehensive presentation of the modeling methods used in atmospheric chemistry focuses on both theory and practice from the fundamental principles behind models through to their applications in interpreting observations An encyclopaedic coverage of methods used in atmospheric modeling including their advantages and disadvantages makes this a one stop resource with a large scope Particular emphasis is given to the mathematical formulation of chemical radiative and aerosol processes advection and turbulent transport emission and deposition processes as well as major chapters on model evaluation and inverse modeling The modeling of atmospheric chemistry is an intrinsically interdisciplinary endeavour bringing together meteorology radiative transfer physical chemistry and biogeochemistry making the book of value to a broad readership Introductory chapters and a review of the relevant mathematics make this book instantly accessible to graduate students and researchers in the atmospheric sciences

**Introduction to Atmospheric Chemistry** Daniel J. Jacob, 1999-12-21 Atmospheric chemistry is one of the fastest growing fields in the earth sciences Until now however there has been no book designed to help students capture the essence of the subject in a brief course of study Daniel Jacob a leading researcher and teacher in the field addresses that problem by presenting the first textbook on atmospheric chemistry for a one semester course Based on the approach he developed in his class at Harvard Jacob introduces students in clear and concise chapters to the fundamentals as well as the latest ideas and findings in the field Jacob s aim is to show students how to use basic principles of physics and chemistry to describe a complex system such as the atmosphere He also seeks to give students an overview of the current state of research and the work that led to this point Jacob begins with atmospheric structure design of simple models atmospheric transport and the continuity equation and continues with geochemical cycles the greenhouse effect aerosols stratospheric ozone the oxidizing power of the atmosphere smog and acid rain Each chapter concludes with a problem set based on recent scientific literature This is a novel approach to problem set writing and one that successfully introduces students to the prevailing issues This is a major contribution to a growing area of study and will be welcomed enthusiastically by students and teachers alike

*Atmospheric Chemistry* Christine S. Sloane, T. W. Tesche, 1991-03-16 This book draws upon the knowledge and experience of modeling experts currently engaged in conducting assessments regarding the predictive strength of atmospheric models The book covers all of the major important atmospheric areas including large scale models for ozone depletion and global warming regional scale models for urban smog ozone and visibility impairment and acid rain as well as accompanying models of cloud processes and biofeedbacks Atmospheric scientists and regulators should consider this book required reading
