

Flow Modeling and Runner Design Optimization in Turgo Water Turbines

John S. Anagnostopoulos, and Dimitrios E. Papantonis

Abstract—The incorporation of computational fluid dynamics in the design of modern hydraulic turbines appears to be necessary in order to improve their efficiency and cost-effectiveness beyond the traditional design practices. A numerical optimization methodology is developed and applied in the present work to a Turgo water turbine. The fluid is simulated by a Lagrangian mesh-free approach that can provide detailed information on the energy transfer and enhance the understanding of the complex, unsteady flow field, at very small computing cost. The runner blades are initially shaped according to hydrodynamic theory, and parameterized using Bézier polynomials and interpolation techniques. The use of a limited number of free design variables allows for various modifications of the standard blade shape, while stochastic optimization using evolutionary algorithms is implemented to find the best blade that maximizes the attainable hydraulic efficiency of the runner. The obtained optimal runner design achieves considerably higher efficiency than the standard one, and its numerically predicted performance is comparable to a real Turgo turbine, verifying the reliability and the prospects of the new methodology.

Keywords—Turgo turbine, Lagrangian flow modeling, Surface parameterization, Design optimization, Evolutionary algorithms.

1. INTRODUCTION

TURGO water turbines belong to the impulse type hydraulic machines along with the more common, Pelton turbines. Turgo turbines are well suited to replacing low head multi-jet Pelton or high head Francis turbines with poor part load efficiencies, and they can be used in medium to high heads, from 15 to 300 m. Like Pelton, Turgo turbine has a flat efficiency curve and provides excellent part-load efficiencies hence it constitutes the best solution for large flow rate variations. Also, it can operate for long periods and minimum wear when the water is laden with silt and other entrained matter.

The Turgo turbine was first patented by a European company in 1919, although the earliest design dates back to

the end of the sixteenth century (Fig. 1a). The water jet enters one side of the runner and exits through the other (Fig. 1b). This allows for a more efficient escape of 'used' water, which does not interfere with the incoming jet. Hence, larger jet and flow rates can be treated compared to a Pelton runner of same diameter. As a result, a Turgo turbine has higher specific speed and smaller size than a Pelton turbine for the same power. This compensates for its more complex design and more difficult manufacturing process. Moreover, the smaller runner diameter allows to obtain a higher angular velocity, so that the turns multiplier in the coupling with the electrical generator can be avoided, decreasing the costs and increasing the mechanical reliability of the system.

Very few scientific articles can be found in the literature dealing with the design of Turgo runner, and only few companies construct this turbine type worldwide. In most books and manuals that include impulse turbines description the Turgo turbine is referred simply as a variant of the Pelton turbine. An extended description is first given in Gibson [1], but without any information about dimensioning and design of the runner. Some interesting elements for dimensioning and standardization of small Turgo turbines are given in the manuals of Georoug [2], [3], as well as by Bednar [4].

The numerical modeling and analysis of the flow in a Turgo runner, along with a preliminary design optimization study of its blades, is the aim of the present work. To achieve this, the inner surface of a blade is initially designed according to hydrodynamics theory and using Bézier polynomials, while a mesh-free Lagrangian method is adopted for the simulation of the free-surface flow developed on the blade surface. In order to improve the hydraulic efficiency of the initial design, a

Methods for Design Optimization Using High Fidelity Turbulent Flow Simulations Chaitanya Anil Talnikar, 2015 Design optimization with high fidelity turbulent flow simulations can be challenging due to noisy and expensive objective function evaluations The noise decays slowly as computation cost increases therefore is significant in most simulations It is often unpredictable due to chaotic dynamics of turbulence in that it can be totally different for almost identical simulations This thesis presents a modified parallel Bayesian optimization algorithm designed for performing optimization with high fidelity simulations It strives to find the optimum in a minimum number of evaluations by judiciously exploring the design space Additionally to potentially augment the optimization algorithm with the availability of a gradient a massively parallel discrete unsteady adjoint solver for the compressible Navier Stokes equations is derived and implemented Both the methods are demonstrated on a large scale transonic fluid flow problem in a turbomachinery component

Unveiling the Magic of Words: A Overview of "**Flow Modeling And Runner Design Optimization In Turgo**"

In a global defined by information and interconnectivity, the enchanting power of words has acquired unparalleled significance. Their capability to kindle emotions, provoke contemplation, and ignite transformative change is really awe-inspiring. Enter the realm of "**Flow Modeling And Runner Design Optimization In Turgo**," a mesmerizing literary masterpiece penned by way of a distinguished author, guiding readers on a profound journey to unravel the secrets and potential hidden within every word. In this critique, we shall delve into the book is central themes, examine its distinctive writing style, and assess its profound impact on the souls of its readers.

FAQs About Flow Modeling And Runner Design Optimization In Turgo Books

1. Where can I buy Flow Modeling And Runner Design Optimization In Turgo books? Bookstores: Physical bookstores like Barnes & Noble, Waterstones, and independent local stores. Online Retailers: Amazon, Book Depository, and various online bookstores offer a wide range of books in physical and digital formats.
2. What are the different book formats available? Hardcover: Sturdy and durable, usually more expensive. Paperback: Cheaper, lighter, and more portable than hardcovers. E-books: Digital books available for e-readers like Kindle or software like Apple Books, Kindle, and Google Play Books.
3. How do I choose a Flow Modeling And Runner Design Optimization In Turgo book to read? Genres: Consider the genre you enjoy (fiction, non-fiction, mystery, sci-fi, etc.). Recommendations: Ask friends, join book clubs, or explore online reviews and recommendations. Author: If you like a particular author, you might enjoy more of their work.
4. How do I take care of Flow Modeling And Runner Design Optimization In Turgo books? Storage: Keep them away from direct sunlight and in a dry environment. Handling: Avoid folding pages, use bookmarks, and handle them with clean hands. Cleaning: Gently dust the covers and pages occasionally.
5. Can I borrow books without buying them? Public Libraries: Local libraries offer a wide range of books for borrowing. Book Swaps: Community book exchanges or online platforms where people exchange books.
6. How can I track my reading progress or manage my book collection? Book Tracking Apps: Goodreads, LibraryThing, and Book Catalogue are popular apps for tracking your reading progress and managing book collections. Spreadsheets: You can create your own spreadsheet to track books read, ratings, and other details.
7. What are Flow Modeling And Runner Design Optimization In Turgo audiobooks, and where can I find them? Audiobooks: Audio recordings of books, perfect for listening while commuting or multitasking. Platforms: Audible, LibriVox, and Google Play Books offer a wide selection of audiobooks.
8. How do I support authors or the book industry? Buy Books: Purchase books from authors or independent bookstores.

Reviews: Leave reviews on platforms like Goodreads or Amazon. Promotion: Share your favorite books on social media or recommend them to friends.

9. Are there book clubs or reading communities I can join? Local Clubs: Check for local book clubs in libraries or community centers. Online Communities: Platforms like Goodreads have virtual book clubs and discussion groups.
10. Can I read Flow Modeling And Runner Design Optimization In Turgo books for free? Public Domain Books: Many classic books are available for free as they're in the public domain. Free E-books: Some websites offer free e-books legally, like Project Gutenberg or Open Library.
