the first is if the immersed boundary now implemented in openfoam extend3 2 can handle the the multiregion problem such
as heat transfer between two regions i think maybe now the ib just act as a wall boundary is that correct the second is if the
stl surface need closed because i want to add cyclic boundary for the left and right side of the

rep power 13 i am experiencing with the implementation of ibm in openfoam i am working with simpleibfoam it would be
great if this method could be implemented in the future version of openfoam ext by default as it is a very powerful method

however i did not find the current implementation robust enough yet
