The Archean Earth Martin Homann, Wladyslaw Altermann, Timothy W. Lyons, Richard E. Ernst, Christoph Heubeck, Eva Stueeken, Alex Webb, Dominic Papineau, Rajat Mazumder, Paul RD Mason, 2025-12-19 The Archean Earth Tempos and Events Second Edition is a process based reference book that focuses on the most important events in early Earth bringing together experts across Earth Sciences to give a comprehensive overview of the main events of the Archean Eon as well as of the rates at which important geological and geobiological processes occurred in the same time interval Over the last two decades significant progress has been made in our understanding of the processes and events on the early Earth corresponding to advances in the analytical technologies and the continuing efforts of many colleagues that pursue their passion of unravelling the Archean rock record The book addresses the origin of the Earth succeeding impact events and the evolution of the early Earth covering topics such as Archean tectonics volcanism generation of continental crust and the ongoing debate about the

onset of plate tectonics the evolution and models for Earth's hydrosphere and atmosphere the Archean atmosphere and chemical sedimentation and sedimentation through Archean time among others Each topic is well illustrated and includes a closing commentary at the end of each chapter leading up to the final chapter which blends the major geological events and rates at which important processes occurred into a synthesis postulating a number of event clusters in the Archean when significant changes occurred in many natural systems and geological environments Provides a comprehensive introduction and overview on early Earth highlighting the Archean Eon in the context of the larger time scales Presents detailed descriptions of the main processes events and rates that occurred throughout the Archean Offers an assessment of the first habitable environments the preserved morphological and geochemical traces of early life and the impact it had on Earth's biogeochemical cycles

Planetary Systems Raymond T. Pierrehumbert, 2021-12-09 Not long ago the Solar System was the only example of a planetary system a star and the bodies orbiting it that we knew Now we know thousands of planetary systems and have even been able to observe planetary systems at the moment of their birth This Very Short Introduction explores this new frontier incorporating the latest research The book takes the reader on a journey through the grand sweep of time from the moment galaxies begin to form after the Big Bang to trillions of years in the future when the Universe will be a dilute soup of dim galaxies populated mostly by red dwarf stars Throughout Raymond T Pierrehumbert introduces the latest insights gained from a new generation of telescopes that catch planetary systems at the moment of formation and to the theoretical advances that attempt to make sense of these observations He explains how the elements that make up life and the planets on which life can live are forged in the interiors of dying stars and make their way into rocky planets He also explores the vast array of newly discovered planets orbiting stars other than our own and explains the factors that determine their climates Finally he reveals what determines how long planetary systems can live and what happens in their end times

Very Short Introductions Brilliant Sharp Inspiring ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
