Chen, Jenny K. Chen, 2021-04-08 This book provides a concise point of reference for the most commonly used regression
methods It begins with linear and nonlinear regression for normally distributed data logistic regression for binomially
distributed data and Poisson regression and negative binomial regression for count data It then progresses to these
regression models that work with longitudinal and multi level data structures The volume is designed to guide the transition
from classical to more advanced regression modeling as well as to contribute to the rapid development of statistics and data

Using R* W. Holmes Finch, Jocelyn E. Bolin, 2024-04-05 Like its bestselling predecessor *Multilevel Modeling Using R* Third
Edition provides the reader with a helpful guide to conducting multilevel data modeling using the R software environment
After reviewing standard linear models the authors present the basics of multilevel models and explain how to fit these
models using R They then show how to employ multilevel modeling with longitudinal data and demonstrate the valuable
graphical options in R The book also describes models for categorical dependent variables in both single level and multilevel
data The third edition of the book includes several new topics that were not present in the second edition Specifically a new
chapter has been included focussing on fitting multilevel latent variable modeling in the R environment With R it is possible
to fit a variety of latent variable models in the multilevel context including factor analysis structural models item response
theory and latent class models The third edition also includes new sections in Chapter 11 describing two useful alternatives
to standard multilevel models fixed effects models and generalized estimating equations These approaches are particularly
useful with small samples and when the researcher is interested in modeling the correlation structure within higher level
units e g schools The third edition also includes a new section on mediation modeling in the multilevel context in Chapter 11
This thoroughly updated revision gives the reader state of the art tools to launch their own investigations in multilevel
modeling and gain insight into their research Multilevel Modeling Douglas A. Luke, 2019-12-13 *Multilevel Modeling* is a
concise practical guide to building models for multilevel and longitudinal data Author Douglas A Luke begins by providing a
rationale for multilevel models outlines the basic approach to estimating and evaluating a two level model discusses the

major extensions to mixed effects models and provides advice for where to go for instruction in more advanced techniques Rich with examples the Second Edition expands coverage of longitudinal methods diagnostic procedures models of counts Poisson power analysis cross classified models and adds a new section added on presenting modeling results A website for the book includes the data and the statistical code both R and Stata used for all of the presented analyses [Multilevel Analysis](#) Tom A B Snijders, Roel J Bosker, 2011-10-30 The Second Edition of this classic text introduces the main methods techniques and issues involved in carrying out multilevel modeling and analysis Snijders and Bosker's book is an applied authoritative and accessible introduction to the topic providing readers with a clear conceptual and practical understanding of all the main issues involved in designing multilevel studies and conducting multilevel analysis This book provides step by step coverage of multilevel theories ecological fallacies the hierarchical linear model testing and model specification heteroscedasticity study designs longitudinal data multivariate multilevel models discrete dependent variables There are also new chapters on missing data multilevel modeling and survey weights Bayesian and MCMC estimation and latent class models This book has been comprehensively revised and updated since the last edition and now discusses modeling using HLM MLwiN SAS Stata including GLLAMM R SPSS Mplus WinBugs Latent Gold and SuperMix This is a must have text for any student teacher or researcher with an interest in conducting or understanding multilevel analysis Tom A B Snijders is Professor of Statistics in the Social Sciences at the University of Oxford and Professor of Statistics and Methodology at the University of Groningen Roel J Bosker is Professor of Education and Director of GION Groningen Institute for Educational Research at the University of Groningen [Generalized Linear Mixed-Effects Models in R](#), 2003 The Nonlinear and Linear Mixed Effects NLME package for the open source statistical software system R provides an effective and efficient way to analyze longitudinal data collected from nested groups of subjects when the response of interest is on a continuous scale It does not provide methods for analyzing binary multinomial or ordinal responses where a general linear mixed effects model GLMM is required We enhanced an existing R implementation for estimating a GLMM which can estimate an approximate model using a crude numerical procedure The R code was rewritten to take advantage of the best available numerical methods and the latest theoretical developments Using simulated data sets we demonstrate that the enhanced code is much faster and numerically robust We propose an approach for modeling ordinal and multinomial data the theory of which is less well developed than that of binomial data The proposed approach is demonstrated using simulated and real data sets The results illustrate the limits of the approximate procedure used in Phase I which motivates the use of a more refined numerical method in Phase II
