**Behavior of Marine Animals** Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21

The majority of the chapters in this volume are structured to include a balance between literature review, original data, and synthesis. The research approaches taken by the authors are generally of two kinds. One centers on the long-term, in-depth study of a single species in which many aspects of its natural history are examined in detail. The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities. Most of the chapters concern obvious aspects of breeding behavior, including habitat selection, the effects of age on breeding, communication, mating systems, synchrony of breeding activities, development of behavior, pre-fledging parental care, and post-fledging parental care. Of these topics, many relate directly to the

advantages and disadvantages of coloniality a conspicuous behavior pattern in marine birds As such they provide para picuou for the further study of coloniality and the social behavior of many other animals Other important areas of marine bird breeding behavior such as courtship behavior antipredator behavior information transfer have not been included because of space limitations Since man s encroachment on the seashore and continental shelf poses certain threats to marine birds a volume elucidating various aspects of their biology has multiple uses As weil as being of value to ornithologists the volume should be useful to managers involved with coastal planning

Animal Communication and Cognition Tabitha Wagner, 2015 Visual signals that are designed for effective communication are complex Over the years researchers interested in the study of animal communication have employed various artificial stimuli during behavioral experiments to precisely control what the observers get to see or experience These diverse techniques to stage animal interactions have offered an alternative to the traditional experimental methods relying on the use of live companions or demonstrators This book begins with a discussion on computer animated stimuli to investigate visual communication in lizards It then discusses the pretend play in signing chimpanzees the evolution of TRP channels as mediators of pheromone signaling and the role of cuticular hydrocarbon based chemical communication in prezygotic reproductive isolation

Bioacoustics, 2000 Cognitive Linguistics and Language Evolution Michael Pleyer, Stefan Hartmann, 2024-03-28 The evolution of language has developed into a large research field Two questions are particularly relevant for this strand of research firstly how did the human capacity for language emerge And secondly which processes of cultural evolution are involved both in the evolution of human language from non linguistic

communication and in the continued evolution of human languages Much research on language evolution that addresses these two questions is highly compatible with the usage based approach to language pursued in cognitive linguistics Focusing on key topics such as comparing human language and animal communication experimental approaches to language evolution and evolutionary dynamics in language this Element gives an overview of the current state of the art of language evolution research and discusses how cognitive linguistics and research on the evolution of language can cross fertilise each other This title is also available as Open Access on Cambridge Core
