Xiwei Xu, Ingo Weber, Mark Staples, 2019-03-15 This book addresses what software architects and developers need to know in order to build applications based on blockchain technology by offering an architectural view of software systems that make beneficial use of blockchains. It provides guidance on assessing the suitability of blockchain on the roles blockchain can play in an architecture on designing blockchain applications and on assessing different architecture designs and tradeoffs. It also serves as a reference on blockchain design patterns and design analysis and refers to practical examples of blockchain based applications. The book is divided into four parts. Part I provides a general introduction to the topic and to existing blockchain platforms including Bitcoin, Ethereum, and Hyperledger Fabric and offers examples of blockchain based applications. Part II focuses on the functional aspects of software architecture describing the main roles blockchain can play in an architecture as well as its potential suitability and design process. It includes a catalogue of 15 design patterns and details how to use model driven engineering to build blockchain based applications. Part III covers the non functional aspects of blockchain applications which are cross cutting concerns including cost, performance, security, and availability. Part IV then presents three detailed real world use cases offering additional insights from a practical perspective. An epilogue summarizes the book and speculates on the role blockchain and its applications can play in the future. This book focusses on the bigger picture for blockchain covering the concepts and technical considerations in the design of blockchain based applications. The use of mathematical formulas is limited to where they are critical. This book is primarily intended for developers, software architects, and chief information officers who need to understand the basic technology, tools, and methodologies to build blockchain applications. It also provides students and researchers new to this field an introduction to this hot topic.

Solidity Smart Contracts Rangel Stoilov, 2019 Learn about Solidity smart contracts, Truffle, Ganache, Ethereum, Blockchain programming, cryptocurrency, DApps, IPFS, and the Remix IDE. About This Video Learn the essentials of the Ethereum blockchain. Understand basic and advanced concepts of the Solidity language. Learn how to deploy your DApp using Heroku. In Detail For the past couple of years there has been no bigger breakthrough in the IT world than Blockchain technology. The extremely fast growth of the industry market and the technology itself has led to an enormous shortage of programmers who truly understand the blockchain technology. Along with the latter, smart contracts have also emerged and with them Solidity. The aim of this course is to give you the easiest and the best route to becoming a blockchain developer. We will be focusing on smart contract development with Solidity in the Ethereum ecosystem. You will learn to create your first smart contracts in the Ethereum blockchain even if you are a complete beginner and know nothing about programming or Solidity. The author will

show you how to create your first smart contracts with Remix the online IDE and we will go through all the features that Solidity gives us as a programming language You will also be able to set up your environment to start coding with Solidity on your local machine The author will show you what settings and configurations he used to set up VSCode and how to successfully install Truffle on Windows After that he will teach you the basics of the Truffle Framework and how to make it work with Ganache as your own private Ethereum blockchain network We will also test out our Solidity smart contract behavior by unit testing with Chai and Mocha If you are a serious developer you need to know that your code is working the way you expect it to When you are finished you will be able to create your own first decentralized application with Solidity and Truffle While other courses are filled in with unnecessary information that makes them hard to navigate through and leave you confused this course will take you step by step from a complete beginner to a master of Solidity and smart contract creation in the Ethereum ecosystem
