gene idea - the model that says that parents pass on discrete heritable unit-genes-that retain their separate identities in offspring

Gregor Mendel - Augustinian monk and botanist whose experiments in breeding garden peas led to his eventual recognition as founder of the science of genetics (1822-1884)

character - a heritable feature that varies among individuals (color)

trait - specific characteristic that varies from one individual to another (purple)

true-breeding - term used to describe organisms that produce offspring identical to themselves if allowed to self-pollinate

hybridization - the act of mixing different species or varieties of animals or plants and thus to produce hybrids

P generation - Parental generation, the first two individuals that mate in a genetic cross.

F1 generation - the first generation of offspring obtained from an experimental cross of two organisms

F2 generation - the second generation of offspring, obtained from an experimental cross of two organisms; the offspring of the F1 generation

law of segregation - Mendel's first law, stating that each allele in a pair separates (segregates) into a different gamete during gamete formation.

Mendel's model - 1. Alternative versions of genes account for variations in inherited characters.
2. For each character an organism inherits two copies of a gene, one from each parent.
