

## Failure Rate and Event Data for use within Risk Assessments (28/06/2012)

### Introduction

1. HID C15 has an established set of failure rates that have been in use for several years. This document details those items and their failure rates. For items not within this set, or for which no values are currently available the inspector carrying out the assessment should estimate failure rates after discussions with Topic Specialists. The failure rates quoted within this document were derived and are intended for use on Land Use Planning cases. They were **NOT** originally intended for use in COMAH Safety Report Assessment because they do not necessarily take account of all factors that could be relevant and significant at particular installations. However, in the absence of site specific data, the values given here may serve as a starting point for safety reports.
2. Figure 1 shows the different types of information that are available in this document. For the full structure, see Figure 2. This introductory section also outlines a framework used in HID C15 to keep references pertaining to failure rates and a system for recording the use of non-generic failure rates used in particular cases.

Figure 1 Information covered in Chapter 6K

3. The first section covers failure rates. HID C15 currently has established failure rates or has some information for most of the items. The items on the diagram in Figure 2 contain a failure rate value(s) and a brief derivation. For rates that have ranges the derivation also contains a brief guide on what factors may affect the value.
4. The second section (see page 80) contains information on event data. The derivation of the rates to be used and how to use them are described.

*Reliability and Risk Assessment* John D. Andrews,T. R. Moss,2002 Risk assessment and risk analysis are now firmly fixed in the engineer s lexicon Every engineering project contract piece of equipment and design requires this discipline by law Reliability is the other key element in the mix for smooth running engineering projects and operations In the modern industrial era economic factors have resulted in the construction and operation of larger and more complex process plant Accidents at these types of plants have led to notorious incidents such as Flixborough Bhopal Chernobyl and Piper Alpha Engineers are working to maximize the benefits of modern processing technology while reducing the safety risks to acceptable levels However each processing plant has unique problems and each must be individually assessed to identify evaluate and control associated hazards The first edition of Reliability and Risk Assessment was ahead of its time The world has caught up with Andrews and Moss and this fully revised

second edition takes the analysis further and brings a more practical slant with greater and extensive use of case studies Reliability and Risk Assessment is for professional engineers but will also prove invaluable for postgraduate students involved in reliability and risk assessment research KEY FEATURES Rigorous mathematical descriptions of the most important techniques particularly fault tree analysis and Markov methods Practical examples of the application of these techniques to real life problems Self contained chapters detail methods of reliability and risk assessment Worked examples clarify the text and highlight salient points Three new detailed case studies include FMECA for a gas turbine system in service inspection of structural components and a business interruption risk analysis **Energy Research Abstracts** ,1985
