Threshold Heather Suzanne Woods, 2024-05-15

Smart homes are domestic spaces outfitted with networked technology made by brands like Google Facebook Amazon and Apple However Silicon Valley purveyors are not the only important actors in smart home development Appliance makers logistics companies health and wellness conglomerates insurance companies and security franchises are all betting on the smart home in an economy that puts a premium on data Together major players in the smart home space have successfully attracted the attention and pocketbooks of millions of households by touting the virtues of ambient networked technologies as an upgrade to modern domestic life If industry predictions hold nearly half of American houses will be smart by 2024 Yet what it means to be smart is still unsettled *Threshold* asks and answers the question How do smart homes communicate cultural values about the role of technology in the 21st century Answering this question is time sensitive as the coming years will determine how smart homes are configured who has access to them and what they mean to their owners policy makers technology companies and others invested in these domestic digital platforms The consequences of these decisions are significant because they impact both smart home residents and society at large At present much of the research on smart homes caters either to industry experts or scientists and engineers This literature often describes or evaluates the technical capacities of the smart home or focuses on user interface and design Instead Heather Woods argues we need a sustained cultural analysis of smart homes that considers the socio technical variables gender class income disparity race criminal justice the housing market and the future of both labor and domesticity that give the smart home meaning *Threshold* takes up this challenge from a rhetorical perspective arguing that smart homes are lived material embodiments of the digital cultures in which they are imagined built and used Those considerations more often than not are relegated to secondary considerations when in truth they are the most pervasive and consequential factors affecting anyone participating in a smart

home ecosystem Woods argues that smart homes are spatial manifestations of a phenomenon called living in digitality a cultural condition whereby users engage with technology at every moment of every day Using extensive fieldwork at smart homes throughout the USA Woods traces how smart homes urge ubiquitous computing as a normalized daily practice readying domestic spaces and their occupants for an increasingly transactional digital future that is largely controlled by corporate interests Threshold advances knowledge in three ways by 1 Offering definitional tools for identifying and evaluating immersive technologies including but not limited to the smart home 2 Identifying three distinct configurations of the smart home according to their domestic and technological functions 3 Demonstrating the productive capacity of smart homes and smart devices to influence social life The book highlights the rhetorical force of smart domesticity for rhetorical scholars digital humanists political scientists critical theorists policy makers and residents or prospective residents of smart homes Ultimately Threshold serves as a toolkit for recognizing and responding to the persistent encroachment of digital technologies in all parts of our lives

The Future Home is Wise, Not Smart Gerhard Leitner, 2015-10-12 This book introduces the concept of the wise home Whilst smart homes focus on automation technologies forcing users to deal with complex and incomprehensible control and programming procedures the wise home is different By going beyond intelligence or smartness the wise home puts technology in the background and supports explicit enhanced user experience as well as implicit artificial intelligence interaction adequate to the end user s needs The theoretical basis of the wise home is explored and examples for its application for future living are presented based on empirical studies and field work carried out by the author Principles of HCI and the meaning of the home from differing scientific perspective are discussed and a research model based on the concept of user experience UX and iterations is introduced This has resulted in field deployment guides being produced through a systematic development process The Future Home is Wise not Smart will be essential reading to home system developers designers and researchers responsible for smart home deployment or Ambient Assisted Living AAL who will get insights on how to follow a novel approach in developing and adapting smart home systems to their users needs Students with an interest in software design for pervasive systems will benefit by receiving information on how to develop and customise systems for the specific needs of living environments

Inside the Smart Home Richard Harper, 2006-04-18 Using clear and accessible language this book examines the growing field of smart technology for the home The author first introduces the field before exploring the various background issues including how the home differs from other environments He then shows how these background issues affect the design and usability of these technologies A detailed case study looks at the use of handheld and wearable digital technology in sheltered housing The last section examines what it is like to live in a smart home and why they have so far failed to reach the levels of success originally predicted Invaluable reading for anybody interested in designing smart technologies for the home
