Supply Chain Planning Hans-Otto Günther, Herbert Meyr, 2009-03-05
In recent years supply chain planning has emerged as one of the most challenging problems in the industry As a consequence the planning focus is shifting from the management of plant specific operations to a holistic view of the various logistics and production stages that is an approach in which suppliers production plants and customers are considered as constituents of an integrated network A major driving force behind this development lies in the globalization of the world economy which has facilitated the cooperation between different partners working together in world wide logistics networks Hence considerable cost savings can be gained from optimizing the structure and the operations of complex supply networks linking plants suppliers distribution centres and customers Consequently to improve the performance of the entire logistic chain more sophisticated planning systems and more effective decision support are needed Clearly successful applications of supply chain management have driven the development of advanced planning systems APS which are concerned with supporting decision making activities at

the strategic tactical and operational decision level These software packages basically rely on the application of quantitative methods which are used to model the underlying complex decision problems considering the limited availability of resources and the need to react on time to customer orders The core module at the mid term level of APS comprises operational supply chain planning In many industries production stages are assigned to different plants and distribution centres have been established at geographically dispersed locations

Computational Intelligence in Logistics and Supply Chain Management Thomas Hanne, Rolf Dornberger, 2016-07-27 This book deals with complex problems in the fields of logistics and supply chain management and discusses advanced methods especially from the field of computational intelligence CI for solving them The first two chapters provide general introductions to logistics and supply chain management on the one hand and to computational intelligence on the other hand The subsequent chapters cover specific fields in logistics and supply chain management work out the most relevant problems found in those fields and discuss approaches for solving them Chapter 3 discusses problems in the field of production and inventory management Chapter 4 considers planning activities on a finer level of granularity which is usually denoted as scheduling In chapter 5 problems in transportation planning such as different types of vehicle routing problems are considered While chapters 3 to 5 rather discuss planning problems which appear on an operative level chapter 6 discusses the strategic problem of designing a supply chain or network The final chapter provides an overview of academic and commercial software and information systems for the discussed applications There appears to be a gap between general textbooks on logistics and supply chain management and more specialized literature dealing with methods for computational intelligence operations research etc for solving the complex operational problems in these fields For readers it is often difficult to proceed from introductory texts on logistics and supply chain management to the sophisticated literature which deals with the usage of advanced methods This book fills this gap by providing state of the art descriptions of the corresponding problems and suitable methods for solving them **Strategic Design and Digitalisation of the Supply Chain** Torsten Becker, 2024-12-30 Digital supply chains increase companies competitiveness A systematic approach

describes the development of strategies to achieve challenging corporate goals with the supply chain and its digitalisation. These include better fulfilling customer requirements, increasing sales and simultaneously reducing costs. Strategy patterns are presented and their implementation in companies is described. Entrepreneurs, supply chain and operations managers receive a practice-oriented guide on how to align their company for the future. The tried and tested methods and approaches accelerate and facilitate strategy development, implementation and support through digital solutions. The focus is on making buying decisions, finding solutions for skills, digital solutions in production technology, 3D printing and the impact of Industry 4.0 and environmental aspects on the supply chain. Practical examples will show how new solution concepts support the design of future-oriented supply chains. The trigger points that could jeopardise a successful supply chain will also be presented, as well as the design for time and cost optimisation in the overall chain. How must a company fundamentally question the historically grown supply chain? What is essential in supply chain optimisation? The strategies presented define the processes, architectures, the use of digital technologies and the deployment of resources, considering the overarching corporate strategy which calls for shorter delivery times and lower costs to remain competitive.
