

The Descriptive Phenomenological Psychological Method

Amedeo Giorgi, Barbro Giorgi^{1*} and James Morley

Phenomenology is a philosophy that began in 1900 with the publication of *Logical Investigations* by Edmund Husserl (1970). In that work Husserl introduced a novel way of examining and studying the phenomenon of consciousness. It should be remembered that psychology was founded in 1879 as the science of consciousness by Wilhelm Wundt in Leipzig. Wundt pursued the study of consciousness primarily by the use of empirical methods. Later, when the behaviorist movement (Watson, 1913), dominated the field, positivistic approaches became dominant. These approaches made sense because both empiricism and positivism, historically, were philosophies associated with scientific investigations: empiricism since the seventeenth century and positivism since the nineteenth century. Since phenomenology was the most recent philosophy to support scientific endeavors, and its criteria and emphases differ from those of empiricism or positivism, it has not been easily assimilated by psychology. It has taken time for psychologists to respond to what it has to offer. The exception that proves the rule is the impact that it had on the Würzburg experiments on thinking (Humphrey, 1963) that took place in the first decade of the twentieth century.

Like most intellectual movements phenomenology is not all of one piece. While Husserl laid out the main dimensions of the phenomenological

movement, almost every follower of his deviated from him in some manner or other. Since there are a variety of phenomenological interpretations one should not be surprised that several interpretations of the phenomenological method have taken place within psychology. In this chapter we will detail one way in which psychologists have adapted an articulation of the philosophical phenomenological method for its scientific purposes and only briefly describe some other interpretations without any effort at evaluation.

In a previous version of this chapter we offered a mostly historical and theoretical explication of the phenomenological movement in psychology. We covered the various interpretations of the meaning of phenomenology when applied to psychology. While including a synopsis of this historical review ahead, this new chapter is intended as an example that demonstrates how the method can be concretely applied to descriptive data, but we urge that it not be construed as a completed research project. Examples of complete contemporary applications will be referenced at the very conclusion. But before doing so, it is important to spell out the intricate but different and difficult interdisciplinary relationship between the philosophical and psychological levels of analysis.

Throughout most of its history, especially in the West, science has been based on some

The Descriptive Phenomenological Method in Psychology Amedeo Giorgi, 2009 This comprehensive work from one of the leading thinkers in humanistic psychology provides a thorough discussion of the phenomenological foundations for qualitative research in psychology Amedeo Giorgi's examination operates out of the intersection of phenomenological philosophy science and psychology such a multidisciplinary approach allows him to challenge several long standing assumptions about the practice of psychology Giorgi asserts that empiricism is not the best philosophy for grounding the science of psychology rather the broader phenomenological theory of science permits more adequate psychological development Giorgi draws from Husserl's philosophical principles the reasons for conducting research in psychology and then offers practical steps for applying a phenomenological method and real examples of applications of the method In fact Giorgi proposes a method that is theoretically grounded in phenomenological philosophy and yet treats empirically derived data This is a rigorous but open qualitative research method that is tolerant of pararational givens as well as one that is supportive of rational criteria The analyses and methods presented in *Phenomenological Method in Psychology* will be attractive to psychologists phenomenologists and researchers involved in qualitative research throughout social and human science disciplines

Descriptive Phenomenological Psychological Method Rodger Broome, 2011 This paper is the methodology section of my doctoral dissertation that outlines the Descriptive Phenomenological Psychological Method of research as it has been taught to me by Amedeo P Giorgi Giorgi 2009 based his method on Husserl's descriptive phenomenological philosophy as an alternative epistemology for human science research This method section references Giorgi's work and the phenomenological tradition of Husserl Merleau Ponty and others Each step of Giorgi's modified Husserlian method is described and explained in the context of doing psychological research on the lived experience of the participants in my dissertation research The steps are 1 assume the phenomenological attitude 2 read entire written account for a sense of the whole 3 delineate meaning units 4 transform the meaning units into psychologically sensitive statements of their lived meanings and 5 synthesize a general psychological structure of the experience base on the constituents of the experience It is the first person psychological perspective that is sought so that an empathetic position can be adopted by the end user of the research

Reflections on Certain Qualitative and Phenomenological Psychological Methods Amedeo Giorgi, 2020-06-15 One could describe the status of psychological research today as one in which qualitative methods based upon diverse philosophies have been developing and advancing at a fast pace It is a time therefore when reflections on this state of affairs are appropriate The five essays in this book are all concerned with qualitative methods and their philosophical backgrounds Briefly the first essay contrasts the relative merits of the three most used philosophical bases for qualitative methods empirical philosophy hermeneutics and Husserlian descriptive phenomenology The second essay tries to resolve the tensions between descriptive and interpretive methods Both are of service to science but they relate

to different conditions The third essay discusses certain pitfalls that should be avoided when conducting psychological research on oneself The fourth essay describes the extension of certain guidelines when using the descriptive phenomenological method The fifth essay challenges the assumption of naturalism for psychology and argues for the development of a non naturalistic method for psychology

Authentic Professional Learning Ann Webster-Wright,2010-08-05 There is considerable and growing interest in professionals learning across their working lives The growth in this interest is likely premised upon the increasing percentage of those who are being employed under the designation as professionals or para professional workers in advanced industrial economies Part of being designated in this way is a requirement to be able to work autonomously and in a relatively self regulated manner Of course many other kinds of employment also demand such behaviours However there is particular attention being given to the ongoing development of workers who are seen to make crucial decisions and take actions about health legal and financial matters Part of this attention derives from expectations within the community that those who are granted relative autonomy and are often paid handsomely should be current and informed in their decision making Then like all other workers professionals are required to maintain their competence in the face of changing requirements for work Consequently a volume that seeks to inform how best this ongoing learning can be understood supported and assisted is most timely and welcomed This volume seeks to elaborate professional learning through a consideration of the concept of authentic professional learning What is proposed here is that in contrast to programmatic approaches towards professional development the process of continuing professional learning is a personal complex and diverse process that does not lend itself to easy prescription or the realisation of others intentions

Phenomenology and Psychological Research Amedeo Giorgi,1985 This book is both a theoretical justification of a phenomenological and human scientific approach to psychological research and a presentation of findings in the areas of cognitive clinical and social psychology The book is important because it is the most sustained statement to date about a phenomenological approach to psychological research along with original findings to compare with mainstream

psychology in crucial areas of psychology cognitive clinical and social psychology Phenomenology and Psychological Research is further clarification of the phenomenological approach to psychological research along with examples of application in four different content areas learning and thinking both examples of alternative approaches to cognitive processes self deception clinical psychology and criminal victimization social psychology As such it gives the reader who is merely curious about the possibilities of phenomenological approaches a good opportunity to evaluate its fruitfulness whereas those who are already sympathetic to the approach will find a greater articulation of the theory behind the procedures Lastly the reader will find in this study an example of a descriptive and qualitative approach to psychological research that claims to meet both phenomenological and human scientific criteria It is one of the first books to make such a claim about psychological research
