Complex Analysis Springer Joseph Bak:

Complex Analysis Joseph Bak, Donald J. Newman, 1999-06-25 This unusually lively textbook introduces the theory of analytic functions explores its diverse applications and shows the reader how to harness its powerful techniques The book offers new and interesting motivations for classical results and introduces related topics that do not appear in this form in other texts For the second edition the authors have revised some of the existing material and have provided new exercises and solutions

Complex Analysis Dr. Vijay Saini, Complex analysis is the branch of mathematical analysis that studies functions of complex variables that is functions whose inputs and or outputs are complex numbers with a strong focus on analytic holomorphic functions It explores concepts like the Cauchy Riemann equations contour integrals power series expansions singularities residues and conformal mappings Complex analysis has powerful theoretical properties e g functions that are complex differentiable are automatically infinitely differentiable and equal to their Taylor series in a region and wide applications in areas like physics quantum mechanics fluid dynamics engineering and other parts of pure mathematics Suitable for undergraduates or beginning graduate students with knowledge of real analysis calculus Covers fundamental topics complex numbers complex plane geometry analytic functions power series conformal mappings integrals in the complex plane Includes more advanced topics or special chapters residues Laurent Taylor series meromorphic functions mapping theorems Clear exposition with rigorous proofs but accessible presentation Rich with examples graphics diagrams and sets of exercises for practice Some books include special features like applications historical notes or physical engineering uses of complex analysis

Introduction to Complex Analysis Michael E. Taylor, 2019-10-18 In this text the reader will learn that all the basic functions that arise in calculus such as powers and fractional powers exponentials and logs trigonometric functions and their inverses as well as many new functions that the reader will meet are naturally defined for complex arguments Furthermore this expanded setting leads to a much richer understanding of such functions than one could glean by merely considering them in the real domain For example understanding the exponential function in the complex domain via its differential equation provides a clean path to Euler's formula and hence to a self contained treatment of the trigonometric functions Complex analysis developed in partnership with Fourier analysis differential equations and geometrical techniques leads to the development of a cornucopia of functions of use in number theory wave motion conformal mapping and other mathematical phenomena which the reader can learn about from material presented here This book could serve for either a one semester course or a two semester course in complex analysis for beginning graduate students or for well prepared undergraduates whose background includes multivariable calculus linear algebra and advanced calculus

Invitation to Complex Analysis Ralph P. Boas, 2020-05-05 Ideal for a first course in complex analysis this book can be used either as a classroom text or for independent study Written at a level accessible to advanced undergraduates and beginning graduate students the book is suitable for readers acquainted with advanced calculus or introductory real analysis

The treatment goes beyond the standard material of power series Cauchy's theorem residues conformal mapping and harmonic functions by including accessible discussions of intriguing topics that are uncommon in a book at this level The flexibility afforded by the supplementary topics and applications makes the book adaptable either to a short one term course or to a comprehensive full year course Detailed solutions of the exercises both serve as models for students and facilitate independent study Supplementary exercises not solved in the book provide an additional teaching tool This second edition has been painstakingly revised by the author's son himself an award winning mathematical expositor

Complex Analysis
V. Karunakaran, 2005 The Second Edition of Complex Analysis Karunakaran's contributions feature comprehensive approaches to various areas ranging from the concept of differentiation for complex valued functions of a complex variable to an introduction on the theory of univalent functions with an exclusive section on Analytic automorphisms on plane domains

Recent Developments in Fractal Geometry and Dynamical Systems Sangita Jha, Mrinal Kanti Roychowdhury, Saurabh Verma, 2024-04-18 This volume contains the proceedings of the virtual AMS Special Session on Fractal Geometry and Dynamical Systems held from May 14-15 2022 The content covers a wide range of topics It includes nonautonomous dynamics of complex polynomials theory and applications of polymorphisms topological and geometric problems related to dynamical systems and also covers fractal dimensions including the Hausdorff dimension of fractal interpolation functions Furthermore the book contains a discussion of self similar measures as well as the theory of IFS measures associated with Bratteli diagrams This book is suitable for graduate students interested in fractal theory researchers interested in fractal geometry and dynamical systems and anyone interested in the application of fractals in science and engineering This book also offers a valuable resource for researchers working on applications of fractals in different fields

Open Source Tools Philipp K. Janert, 2010-11-11 Collecting data is relatively easy but turning raw information into something useful requires that you know how to extract precisely what you need With this insightful book intermediate to experienced programmers interested in data analysis will learn techniques for working with data in a business environment You'll learn how to look at data to discover what it contains how to capture those ideas in conceptual models and then feed your understanding back into the organization through business plans metrics dashboards and other applications Along the way you'll experiment with concepts through hands on workshops at the end of each chapter Above all you'll learn how to think about the results you want to achieve rather than rely on tools to think for you Use graphics to describe data with one two or dozens of variables Develop conceptual models using back of the envelope calculations as well as scaling and probability arguments Mine data with computationally intensive methods such as simulation and clustering Make your conclusions understandable through reports dashboards and other metrics programs Understand financial calculations including the time value of money Use dimensionality reduction techniques or predictive analytics to conquer challenging
