and how to design machines that can see shapes as we do He reviews the long history of the subject allowing the reader to understand why it has taken so long to understand shape perception and offers a new theory of shape Until recently shape was treated in combination with such other perceptual properties as depth motion speed and color This resulted in apparently contradictory findings which made a coherent theoretical treatment of shape impossible Pizlo argues that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision   **Forthcoming Books** Rose Arny,2000   **The Java Tutorial Continued** Mary Campione,Kathy Walrath,Alison Huml,1999 This book is a collection of tutorials written by Java Team members experts who are the authority in their areas of the Java platform This book is a self paced example driven tutorial approach to JDK 1 2 hot topics You ll find coverage of new topics such as collections internationalization advanced 2D graphics sound JavaBeans security servlets JDBC IDL RMI JAR standard extensions JNI reflection and reference objects The CD itself is a gold mine It contains this book and The Java Tutorial Second Edition in HTML format plus a combined index and JDK 1 2   **Proceedings of the Third International Network Conference (INC2002)** Paul Dowland,Steven Furnell,2012-06-26 This book contains the proceedings of the Third International Network Conference INC 2002 which was held in Plymouth UK in July 2002 A total of 72 papers were accepted for inclusion in the conference and they are presented here in 8 themed chapters The main topics of the book include Web Technologies and Applications Network Technologies Multimedia over IP Quality of Service Security and Privacy Distributed Technologies Mobility and Applications and Impacts The papers address state of the art research and applications of network technology arising from both the academic and industrial domains The book should consequently be of interest to network practitioners researchers academics and technical managers involved in the design development and use of network systems   **Essentials Of Java Programming** C Muthu,   **Java by Dissection** Ira Pohl,Charlie McDowell,2003-05-01 Enlisting the best selling by dissection method of instruction this book teaches programming techniques and presents the Java language in a sound and structured manner that is appropriate for both novice and seasoned programmers It presents a thorough introduction to the programming process by carefully developing working programs to illuminate key features of the Java programming language Program code is explained in an easy to follow manner throughout This book presents readers with a clear and thorough introduction to the programming process by carefully developing working Java programs
