Energy-Efficient Computing and Data Centers Luigi Brochard, Vinod Kamath, Julita Corbalán, Scott Holland, Walter Mittelbach, Michael Ott, 2019-08-06 Data centers consume roughly 1% of the total electricity demand while ICT as a whole consumes around 10% Demand is growing exponentially and left unchecked will grow to an estimated increase of 20% or more by 2030 This book covers the energy consumption and minimization of the different data center components when running real workloads taking into account the types of instructions executed by the servers It presents the different air and liquid cooled technologies for servers and data centers with some real examples including waste heat reuse through adsorption chillers as well as the hardware and software used to measure model and control energy It computes and compares the Power Usage Effectiveness and the Total Cost of Ownership of new and existing data centers with different cooling designs including free cooling and waste heat reuse leading to the Energy Reuse Effectiveness The book concludes by demonstrating how a well designed data center reusing waste heat to produce chilled water can reduce energy consumption by roughly 50% and how renewable energy can be used to create net zero energy data centers

Green Information Technology Mohammad Dastbaz, Colin Pattinson, Babak Akhgar, 2015-03-09 We are living in the era of Big Data and the computing power required to deal with Big Data both in terms of its energy consumption and technical complexity is one of the key areas of research and development The U S Environmental Protection Agency estimates that centralized computing infrastructures data centres currently use 7 gigawatts of electricity during peak loads This translates into about 61 billion kilowatt hours of electricity used By the EPA s estimates power hungry data centres consume the annual output of 15 average sized power plants One of the top constraints to increasing computing power besides the ability to cool is simply delivering enough power to a given physical space Green Information Technology A Sustainable Approach offers in a single volume a broad collection of practical techniques and methodologies for designing building and implementing a green technology strategy in any large enterprise environment which up until now has been scattered in difficult to find scholarly resources Included here is the latest information on emerging technologies and their environmental impact how to effectively measure sustainability discussions on sustainable hardware and software design as well as how to use big data and cloud computing to drive efficiencies and establish a framework for sustainability in the information technology infrastructure Written by recognized experts in both academia and industry Green Information Technology A Sustainable Approach is a must have guide for researchers computer architects computer engineers and IT professionals with an interest in greater efficiency with less environmental impact Introduces the concept of using green procurement and supply chain programs in the IT infrastructure Discusses how to use big data to drive efficiencies and establish a framework for sustainability in the information technology infrastructure Explains how cloud computing can be used to consolidate corporate IT environments using large scale shared infrastructure

Computing Alexander Weisser,2020-10-07 Cloud computing may be borderless but taxes are territorial It is easy to imagine how the two concepts can clash Much effort has gone into harmonizing tax rules across borders with the result that many jurisdictions have very similar tax rules Even so taxation remains a basic expression of national sovereignty The goal of this thesis is to examine how international tax law applies to the cross border cloud computing business Both multinational providers and customers of cloud computing services are analyzed Reflecting three traditional areas of international tax scholarship the goal could be stated in three questions Which jurisdictions have the right to tax What kinds of cloud computing transactions can be taxed What amount of the profit is taxable In more technical terms this means enquiring into how the use of cloud computing affects the permanent establishment status of taxpayers how the different kinds of cloud

computing transactions are characterized under international double taxation treaties and how the calculation of taxable cloud computing profit is affected by transfer pricing In light of the current political events the thesis also offers recommendations de lege lata through a systematic approach Its first part assesses the current taxation of cloud computing The second part evaluates whether the findings of this initial assessment conform to various superior principles of good rulemaking It identifies which of the present tax rules ought to be adapted The final part considers how the rules could be amended to become more compliant with the superior principles In this way Part I embodies the thesis Part II the antithesis and Part III seeks a synthesis IBM Systems Journal ,2007 Journal of Machine Learning Research ,2007 An international forum covering all areas of machine learning **Proceedings of the ...
