Sound Topology, Duality, Coherence and Wave-Mixing Pierre Deymier, Keith Runge, 2017-08-12 This book offers an essential introduction to the notions of sound wave topology duality coherence and wave mixing which constitute the emerging new science of sound It includes general principles and specific examples that illuminate new non conventional forms of sound sound topology unconventional quantum like behavior of phonons duality radical linear and nonlinear phenomena associated with loss and its control coherence and exquisite effects that emerge from the interaction of sound with other physical and biological waves wave mixing The book provides the reader with the foundations needed to master these complex notions through simple yet meaningful examples General principles for unraveling and describing the topology of acoustic wave functions in the space of their Eigen values are presented These principles are then applied to uncover intrinsic and extrinsic approaches to achieving non conventional topologies by breaking the time reversal symmetry of acoustic waves Symmetry breaking can impart topological immunity to wave degradation from imperfection scattering and catalyze controlled coherence In the intrinsic case and the phonon representation of acoustic waves the self interaction interference of a wave through its supporting medium exposes the notion of duality in the quantum statistics i e boson vs fermion characterized by the symmetry of multiple particle states and how the quantum analogue behaviors of sound can be exploited in the form of novel sound based information transfer and processing devices By considering media that mix different types of waves the book addresses the interaction of sound with other physical and biological waves but also brings to light examples of extrinsic processes that can lead to symmetry breaking The coherent conversion of sound into other types of waves as well as the sound induced non conventional topology of elastic electronic spin and biological waves are presented in the case of media exhibiting elasto electronic photo elastic magneto elastic effects and biological mechano transduction

of the Calcium Theme held during the 67th Annual Meeting of the Federation of American Societies for Experimental Biology which took place in Chicago April 10-15 1983 The American Society for Pharmacology and Experimental Therapeutics had the primary responsibility for organizing the scientific program with the assistance of other member societies including the American Physiology Society American Association of Pathologists and American Institute of Nutrition The purpose of the Calcium Theme was to review progress in the diverse areas of investigation bearing on the ubiquitous role of calcium in biological systems In addition to contributions from those participating in the Theme this volume also includes a number of invited papers that were added to fill certain voids in topics covered The authors were selected because they are investigators active in the mainstream of their particular research area possessing the acumen to analyze cogently not only their own recent findings but also to relate these findings to their respective area New information as well as reviews of current concepts generally highlight the individual contributions Undoubtedly some readers may argue with the emphasis made and or the conclusions reached on individual topics In such cases other volumes will hopefully provide a forum for alternative points of view Due to the broad scope of subjects covered and the large number of contributions the papers have been arranged in three sections
