Hart, 1970 [Pattern Classification and Scene Analysis](#) Richard O. Duda, Peter E. Hart, 1973-02-09 Introduction to Mathematical Techniques in Pattern Recognition by Harry C Andrews This volume is one of the first cohesive treatments of the use of mathematics for studying interactions between various recognition environments It brings together techniques previously scattered throughout the literature and provides a concise common notation that will facilitate the understanding and comparison of the many aspects of mathematical pattern recognition The contents of this volume are divided into five interrelated subject areas Feature Selection Distribution Free Classification Statistical Classification Nonsupervised Learning and Sequential Learning Appendices describing specific aspects of feature selection and extensive reference and bibliographies are included 1972 253 pp Threshold Logic and its Applications by Saburo Muroga This is the first in depth exposition of threshold logic and its applications using linear programming and integer programming as optimization tools It presents threshold logic as a unified theory of conventional simple gates threshold gates and their networks This unified viewpoint explicitly reveals many important properties that were formerly concealed in the framework of conventional switching theory based essentially on and or and not gates 1971 478 pp Knowing and Guessing A Quantitative Study of Inference and Information By Satoshi Watanabe This volume presents a coherent theoretical view of a field now split into different disciplines philosophy information science cybernetics psychology electrical engineering and physics The target of investigation is the cognitive process of knowing and guessing In contrast to traditional philosophy the approach is quantitative rather than qualitative The study is formal in the sense that the author is not interested in the contents of knowledge or the physiological mechanism of the process of knowing The author's style is lucid his comments are illuminating The result is a fascinating book which will be of interest to scientists in many different fields Nature 1969 592 pp

Pattern Classification and Scene Analysis Richard O. Duda, 1971 Pattern recognition is an essential part of artificial intelligence and has been the subject of extensive research The report gives a survey of the literature on pattern recognition The survey is divided into two main parts the first part devoted to statistical pattern recognition and the second part devoted to pictorial pattern recognition With the partial exception of waveform recognition almost all of the work in pattern

recognition falls into one or the other of these two categories The bibliography includes more than 500 references Author

The Puzzle of Granular Computing Bruno Apolloni, Witold Pedrycz, Simone Bassis, Dario Malchiodi, 2008-08-20 Rem tene verba sequentur Gaius J Victor Rome VI century b c The ultimate goal of this book is to bring the fundamental issues of information granularity inference tools and problem solving procedures into a coherent unified and fully operational framework The objective is to offer the reader a comprehensive self contained and uniform exposure to the subject The strategy is to isolate some fundamental bricks of Computational Intelligence in terms of key problems and methods and discuss their implementation and underlying rationale within a well structured and rigorous conceptual framework as well as carefully related to various application facets The main assumption is that a deep understanding of the key problems will allow the reader to compose into a meaningful mosaic the puzzle pieces represented by the immense varieties of approaches present in the literature and in the computational practice All in all the main approach advocated in the monograph consists of a sequence of steps offering solid conceptual fundamentals presenting a carefully selected collection of design methodologies discussing a wealth of development guidelines and exemplifying them with a pertinent accurately selected illustrative material

Speechreading by Humans and Machines David G. Stork, Marcus E. Hennecke, 2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to September 8 1995 the first interdisciplinary meeting devoted the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the inevitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical engineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recognition are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth

Syntactic Methods in Pattern Recognition, 1974-11-15 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality

The Scottish Universities Summer School in Physics has been held every year since 1960 The purpose of the school is to
contribute to the dissemination of advanced knowledge and the formation of contacts among scientists from different
countries The lecturers at the school are all international experts in their subject Their brief is to present an up to date
survey of current research in their own field in the form of a coherent series of lectures at a level suitable for students who
are normally in their second or third postgraduate year With more and more sophisticated computers and computer software
proving itself invaluable with its advanced pattern recognition capabilities in such areas as defence and environmental and
industrial control this edited volume discusses various systems that have emerged in recent years and their potential and
actual applications Necessary computer architecture and software tools are explained Image processing and analysis are
discussed paying particular attention to shape and motion analysis and image enhancement Neural networks play a vital role
and are discussed in some detail Specific applications of this technology are concentrated on in the final section of this work

Acta Physica Polonica ,2006 General physics solid state physics applied physics Contributions to Autonomous Mobile Systems Andreas Graffunder,Rüdiger Hantsche,Irmfried Hartmann,Joerg Moebius,Zhiyun Ren,Matthias Boldin,Lutz Vietze,1992 Autonomous mobile systems AMS are systems capable of some mobility and equipped with advanced sensor devices in order to flexibly respond to changing environmental situations thus achieving some degree of autonomy The purpose of this book is to contribute to some essential topics in this broad research area related to sensing and control but not to present a complete design of an AMS Subjects concerning knowledge based control and decision such as moving around obstacles task planning and diagnosis are left for future publications in this series Research in the area of AMS has grown rapidly during the last decade see e g WAXMAN et al 87 DICKMANNNS ZAPP 87 The requirements of an AMS strongly depends on the desired tasks the system should execute its operational environment and the expected speed of the AMS For instance road vehicles obtain velocities of 10 m s and more therefore the processing of sensor data such as video image sequences has to be very fast and simple while indoor mobile robots deal with shorter distances and lower speeds thus more sophisticated techniques are applicable and as is done in our approach additional sensors can be integrated to allow for multi sensor processing
