Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The Problems are cross referenced when they represent several subject areas

*The Contest Problem Book VII*, 2006 Chronicles 275 problems from the American Mathematics Competitions AMC 12 and AMC 10 for the years 1995 through 2000 including the 50th Anniversary AHSME issued in 1999 Twenty three additional problems with solutions are included *First Steps for Math Olympians* J. Douglas Faires, 2006 A major aspect of mathematical training and its benefit to society is the ability to use logic to solve problems The American Mathematics Competitions AMC have been given for more than 50 years to millions of high school students First Steps for Math Olympians considers the basic ideas behind the solutions to the majority of these problems and presents examples and exercises from past exams to illustrate the concepts Anyone taking the AMC exams or helping students prepare for them will find many useful ideas here This book will promote interest in mathematics by providing students with the tools to attack problems that occur on mathematical problem solving exams and specifically to level the playing field for those who do not have access to the enrichment programs that are common at the top academic high schools The book can be used either for self study or to give people who want to help students prepare for mathematics exams easy access to topic oriented material and samples of problems based on that material First Steps for Math Olympians is useful for teachers who want to hold special sessions for students but it is equally valuable for parents who have children with mathematical interest and ability [A Friendly Mathematics Competition](#) Rick Gillman, 2003 The Mathematical Olympiad examinations covering the USA Mathematical Olympiad USAMO and the International Mathematical Olympiad IMO have been published annually by the MAA American Mathematics Competitions since 1976 The IMO is the world mathematics championship for high school students It takes place annually in a different country The IMO competitions help to discover encourage and challenge mathematically gifted young people all over the world The USAMO and the Team Selection Test TST are the last two stages of the selection process leading to representing the United States of America in the IMO The preceding examinations are the AMC 10 or AMC 12 and the American Invitational Mathematics Examination AIME Participation in the AIME USAMO and the TST is by invitation only based on performance in the preceding exams of the sequence Through the AMC contests and the IMO young gifted mathematicians are identified and recognized while they are still in secondary school Participation in these competitions provides them with the chance to measure themselves against other exceptional students from all over the world Editors Andreescu and Feng provide remarkable solutions developed by the examination committees contestants and experts during or after the contests They also provide a detailed report of the 1995 2000 USAMO IMO results and a comprehensive guide to other materials emphasizing advanced problem solving This collection of excellent problems and beautiful solutions is a

valuable companion for students who wish to develop their interest in mathematics outside the school curriculum and to deepen their knowledge of mathematics A Friendly Mathematics Competition tells the story of the Indiana College Mathematics Competition ICMC by presenting the problems solutions and results of the first 35 years of the ICMC The ICMC was organized in reaction to the Putnam Exam its problems were to be more representative of the undergraduate curriculum and students could work on them in teams Originally participation was originally restricted to the small private colleges and universities of the state but was later opened up to students from all of the schools in Indiana The competition was quickly nicknamed the Friendly Competition because of its focus on solving mathematical problems which brought faculty and students together rather than on the competitive nature of winning Organized by year the problems and solutions in this volume present an excellent archive of information about what has been expected of an undergraduate mathematics major over the past 35 years With more than 245 problems and solutions the book is also a must buy for faculty and students interested in problem solving The index of problems lists problems in Algebraic Structures Analytic Geometry Arc Length Binomial Coefficients Derangements Differentiation Differential Equations Diophantine Equations Enumeration Field and Ring Theory Fibonacci Sequences Finite Sums Fundamental Theorem of Calculus Geometry Group Theory Inequalities Infinite Series Integration Limit Evaluation Logic Matrix Algebra Maxima and Minima Problems Multivariable Calculus Number Theory Permutations Probability Polar Coordinates Polynomials Real Valued Functions Riemann Sums Sequences Systems of Equations Statistics Synthetic Geometry Taylor Series Trigonometry and Volumes
