[The Energy Security Paradox](#) Jonna Nyman, 2018-03-30 The decisions we make about energy shape our present and our future From geopolitical tension to environmental degradation and an increasingly unstable climate these choices infiltrate the very air we breathe Energy security politics has direct impact on the continued survival of human life as we know it and the earth cannot survive if we continue consuming fossil energy at current rates The low carbon transition is simply not happening fast enough and change is unlikely without a radical change in how we approach energy security But thinking on energy security has failed to keep up with these changing realities Energy security is primarily considered to be about the availability of reliable and affordable energy supplies having enough energy

and it remains closely linked to national security The Energy Security Paradox looks at contemporary energy security politics in the United States and China the top two energy consumers and producers Based on in depth empirical analysis it demonstrates that current energy security practices actually lead to a security paradox they produce insecurity To illustrate this it develops the energy security paradox as a framework for understanding the interconnected insecurities produced by current practices However it also goes beyond this examining resistance to current practices to highlight that we not only can do energy security differently this is already happening In the process the volume demonstrates that the value of security depends on the context Based on this The Energy Security Paradox proposes a radical reconsideration of how we approach and practice energy security
