## **Blockchain Development Step By Step America 45 887 Blockchain:**

The Spatial Distribution of Microbes in the Environment Rima Franklin, Aaron Mills, 2007-09-04 In my first microbiology class in 1968 Richard Wodzinski opened his first lecture with Wodzinski's Laws of Bacteriology Those laws were 1 Bacteria are very very small 2 Bacteria are our friends and 3 Bacteria always have the last word These simple statements motivated a career of curiosity and started me on a wild ride of discovery with my miniscule colleagues The realization that an entity so tiny could mediate critical ecological processes observed across scales of kilometers begs for an explanation of how populations and communities are distributed within those large spaces How big is a microbial community Where does one stop and another start Are there rules of organization of the communities into spatially discrete patches and can those patches be correlated with observed processes and process rates Over the years I have added what I tell my classes are Mills Corollaries to Wodzinski's Laws With respect to the topic of this volume the corollaries to the first law are 1a But there are a whole lot of them and 1b They can grow very very fast Again distribution in space and time is a central theme and it has motivated much of my effort over the last 30 years
