Properties of Matter

QUESTIONS

Are you able to measure, how these quantities are related?

- Why, according to you, are all these things grouped together?
- Why are these things not grouped together?

What are Physical Properties?

Start with the table in the chapter below to start to understand the concept of physical properties.

A physical property is a characteristic that can be observed without changing the identity of the substance. Mass and volume are physical properties of an object because its mass, that is, weight, and volume do not change when an object is changed. The properties of an object are determined by the properties of the materials the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always the same
