Why are we here? What is the nature of reality? Is the apparent grand design of our universe evidence of a benevolent creator who set things in motion or does science offer another explanation? In *The Grand Design* Stephen Hawking and Leonard Mlodinow present the most illuminating scientific thinking about these and other abiding mysteries of the universe in nontechnical language marked by brilliance and simplicity. According to quantum theory the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe and show how quantum theory predicts the multiverse: the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a

riveting assessment of M theory an explanation of the laws governing our universe that is currently the only viable candidate for a theory of everything the unified theory that Einstein was looking for which if confirmed would represent the ultimate triumph of human reason A succinct startling and lavishly illustrated guide to discoveries that are altering our understanding and threatening some of our most cherished belief systems The Grand Design is a book that will inform and provoke like no other *The universe in a nutshell* Stephen Hawking, Simon Prebble, 2001 Unravelling the latest amazing breakthroughs in theoretical physics Stephen Hawking guides the reader through the evolution of Einsteinian physics to a universe of ten dimensions and a so called theory of everything
