Dynamic-Mesh CFD and Its Application to Flapping-Wing Micro-Air Vehicles ,2006 We are currently developing new numerical simulation methods and computational fluid dynamics CFD codes designed for advanced fluid structure interaction FSI applications that have moving mechanical components and or changing domain shapes The method is called Dynamic Mesh DM and is currently being implemented in parallel within our XFlow CFD simulation code This method involves the tight coupling of automatic mesh generation AMG technology with more traditional parallel CFD methods designed for unstructured meshes By coupling these two distinct technologies together the mesh generation process never stops and continues throughout the entire simulation By doing this we can define a so called dynamic mesh that has the ability to adjust change and modify its structure in response to any changes in geometry or other factors DM CFD technology of XFlow can be used to model the fluid flow around or within flapping wing vehicles rotorcraft engines turbines pumps airdrop systems and has applicability to modeling free surface flow fluid particle flow energy nuclear systems and many bio medical applications Traditionally these are some of the most difficult applications to simulate We are currently demonstrating and testing the DM technique and the capabilities of XFlow through a series of complex FSI applications These applications include the simulation of airdrop systems involving the deployment i e opening of parachutes bio medical applications and the simulation of micro air vehicles MAV and biological systems Results of the modeling of a flapping wing MAV will be highlighted here to demonstrate the capabilities and potential of the DM method in XFlow as well as providing some illustrative results for an interesting application

Computational Methods for Fluid Dynamics Joel H. Ferziger,Milovan Peric,2012-12-06 Computational fluid dynamics commonly known under the acronym CFD is undergoing significant expansion in terms of both the number of courses offered at universities and the number of researchers active in the field There are a number of software packages available that solve fluid flow problems the market is not quite as large as the one for structural mechanics codes in which the use of finite element methods is well established The lag can be explained by the fact that CFD problems are in general more difficult to solve However CFD codes are slowly being accepted

as design tools by industrial users At present users of CFD need to be fairly knowledgeable and this requires education of both students and working engineers The present book is an attempt to fill this need It is our belief that to work in CFD one needs a solid background in fluid mechanics and numerical analysis significant errors have been made by people lacking knowledge in one or the other We therefore encourage the reader to obtain a working knowledge of these subjects before entering into a study of the material in this book Because different people view numerical methods differently and to make this work more self contained we have included two chapters on basic numerical methods in this book The book is based on material offered by the authors in courses at Stanford University the University of Erlangen Niirnberg and the University of Hamburg

Computational Fluid Dynamics for Engineers Bengt Andersson, Ronnie Andersson, Love Håkansson, Mikael Mortensen, Rahman Sudiyo, Berend van Wachem, 2011-12-22 Computational fluid dynamics CFD has become an indispensable tool for many engineers This book gives an introduction to CFD simulations of turbulence mixing reaction combustion and multiphase flows The emphasis on understanding the physics of these flows helps the engineer to select appropriate models to obtain reliable simulations Besides presenting the equations involved the basics and limitations of the models are explained and discussed The book combined with tutorials project and power point lecture notes all available for download forms a complete course The reader is given hands on experience of drawing meshing and simulation The tutorials cover flow and reactions inside a porous catalyst combustion in turbulent non premixed flow and multiphase simulation of evaporation spray respectively The project deals with design of an industrial scale selective catalytic reduction process and allows the reader to explore various design improvements and apply best practice guidelines in the CFD simulations

Computational Fluid Dynamics, 1973 50 Years of CFD in Engineering Sciences Akshai Runchal, 2020-03-09 Prof D Brian Spalding working with a small group of students and colleagues at Imperial College London in the mid to late 1960 s single handedly pioneered the use of Computational Fluid Dynamics CFD for engineering practice This book brings together advances in computational fluid dynamics in a collection of chapters authored by leading researchers many of them students or associates of Prof Spalding The book intends to capture the key developments in specific fields of activity that have been transformed by application of CFD in the last 50 years The focus is on review of the impact of CFD on these selected fields and of the novel applications that CFD has made possible Some of the chapters trace the history of developments in a specific field and the role played by Spalding and his contributions The volume also includes a biographical summary of Brian Spalding as a person and as a scientist as well as tributes to Brian Spalding by those whose life was impacted by his innovations This volume would be of special interest to researchers practicing engineers and graduate students in various fields including aerospace energy power and propulsion transportation combustion management of the environment health and pharmaceutical sciences
