Online Computer Methods Relevant to Chemical Engineering, 1971 *Computer Techniques in chemical engineering*, 1959 *Computational Techniques for Chemical Engineers* C. Storey, H. H. Rosenbrock, 2013-10-22 *Computational Techniques for Chemical Engineers* offers a practical guide to the chemical engineer faced with a problem of computing The computer is a servant not a master its value depends on the instructions it is given This book aims to help the chemical engineer in the right choice of these instructions The text begins by outlining the principles of operation of digital and analogue computers and then discussing the difficulties which arise in formulating a problem for solution on such a machine This is followed by separate chapters on digital computers and their programming the use of digital computers in chemical engineering design work optimization techniques and their application in the selection of optimum designs the solution of sets of non linear algebraic equations via hill climbing and determination of equilibrium compositions by minimization of Gibbs free energy Subsequent chapters discuss the solution of partial or simultaneous differential equations parameter estimation in differential equations continuous systems and analogue computers

programming methods and chemical engineering texts which omit details of writing programs In order to write a computer program and get it to work general theoretical principles are not enough one has to actually do the job This is done in each case by first taking the reader through a manual calculation then presenting a computer program to perform the same task Explanation of how the program operates is given in some detail Topics discussed in this way include computer flowsheeting interpretation and accessing of results and physical data forward feed multi effect evaporation binary distillation linear programming introduction to finite differences with simple heat exchanger example steady state multi dimensional heat conduction unsteady state heat conduction solution of automatic control problems using finite differences In each case the necessary theory is fully introduced The programs are written in BASIC an easily learnt moderately powerful language available on both mainframe and desk top computers

Midlands Branch,1967 *Computer Techniques in Chemical Engineering* American Institute of Chemical Engineers,1959 Computational Methods in Chemical Engineering with Maple Ralph E. White,Venkat R. Subramanian,2010-02-06 This book presents Maple solutions to a wide range of problems relevant to chemical engineers and others Many of these solutions use Maple s symbolic capability to help bridge the gap between analytical and numerical solutions The readers are strongly encouraged to refer to the references included in the book for a better understanding of the physics involved and for the mathematical analysis This book was written for a senior undergraduate or a first year graduate student course in chemical engineering Most of the examples in this book were done in Maple 10 However the codes should run in the most recent version of Maple We strongly encourage the readers to use the classic worksheet mws option in Maple as we believe it is more user friendly and robust In chapter one you will find an introduction to Maple which includes simple basics as a convenience for the reader such as plotting solving linear and nonlinear equations Laplace transformations matrix operations do loop and while loop Chapter two presents linear ordinary differential equations in section 1 to include homogeneous and nonhomogeneous ODEs solving systems of ODEs using the matrix exponential and Laplace transform method In section two of chapter two nonlinear ordinary differential equations are presented and include simultaneous series reactions solving nonlinear ODEs with Maple s dsolve command stop conditions differential algebraic equations and steady state solutions Chapter three addresses boundary value problems
