
BYU Physics 121 Chapter 12 Conceptual Questions and answers 100% correct 2025

In solving a torque balancing homework problem for a beam in static equilibrium, where must we put the axis of rotation? - correct answer ✓ Wherever we want to.

Consider a bicycle parked on a hill and pick the axis of rotation to pass through the point where the front tire touches the ground. The weight of the bicycle exerts a torque about this axis. What other forces on the bicycle will also exert a torque about this axis? - correct answer ✓ The normal force on the back wheel only.

If only two forces act on a body and the body is in static equilibrium, which of the

statements below must be true? - correct answer ✓ D) The two forces must be equal in magnitude and opposite in direction to satisfy the first condition of equilibrium, that all the forces must cancel. The second condition, that the torques must cancel, requires that they act along the same line. If they acted along different lines, then they would create a net torque.

- a. The two forces are equal in magnitude and opposite in direction.
- b. The two forces act along the same line.
- c. The two forces must act in the same plane as each other.
- d. Both a and b must be true

Why is it not possible to sit upright in a chair and then rise to one's feet without first leaning forward? - correct answer ✓ One has to move the center of

Lecture-free Teaching Bonnie S. Wood,2009 *Keeping Those Words in Mind* Max Louwerse,2021-07-15

How can humans keep thousands of words in mind and have no difficulty understanding trillions of sentences The answer to this question might lie in parents teaching their children language skills or in the human brain which may be equipped with a language instinct or maybe in impressive memory skills that link words to their perceptual information Undoubtedly there is some truth to some of these explanations But one answer perhaps the most important answer has been largely ignored *Keeping Those Words in Mind* tries to remedy this oversight Linguist and cognitive psychologist Max Louwerse PhD argues that understanding language is not just possible because of memory brains environment and computation but because of the patterns in the sequence of sounds and words themselves He demonstrates that what seems to be an arbitrary communication system with arbitrary characters and sounds that become words and arbitrary meanings for those words actually is a well organized system that has evolved over tens of thousands of years to make communication as efficient as it is What is needed for humans to acquire language is for humans to recognize and discover the patterns in our communication system By examining how our brains process language and find patterns the intricacies of the language system itself and even scientific breakthroughs in computer science and artificial intelligence *Keeping Those Words in Mind* brings a brand new and interdisciplinary explanation for our ability to extract meaning from language

Gordon,1998 **The Conceptual Foundations of Contemporary Relativity Theory** John Cowperthwaite Graves,1971 The central conceptual idea of the contemporary theory of general relativity or geometrodynamics is the identification of matter with the structure of space time No entities foreign to space time like masses charges or independent fields are needed and physics thus becomes identical with the geometry of space time This idea implies a philosophical description of the universe that is monistic and organic characterized by an all encompassing interdependence of events Moreover it is an idea with deep roots in the history of philosophy For these reasons the author of this important study strives to clarify these philosophical and historical issues before proceeding to the details of the physical theory of geometrodynamics Introduction to Physics and Chemistry Bill W.
