**Problem 1: Liquid Pressure**  
**Continuation of Page 100**

As you worked with the liquid pressure apparatus, you noticed that pressure increases with depth. This is because the weight of the liquid above exerts a downward force on the liquid below. The pressure at any point in a liquid is due to the weight of the liquid above it. The pressure is the same in all directions at any point in a liquid. The pressure at a point in a liquid is given by the equation  $P = \rho gh$ , where  $P$  is the pressure,  $\rho$  is the density of the liquid,  $g$  is the acceleration due to gravity, and  $h$  is the depth of the liquid.
