

The background of the entire cover is a dark blue/black space filled with a complex network of glowing lines and nodes. The nodes are represented by small circles in various colors including cyan, white, and purple. The lines connecting them are thin and multi-colored, creating a web-like structure that suggests digital connectivity and data flow.

Cybercrime affects both a virtual and a real body but the effects upon each are different This phenomenon is clearest in the case of identity theft In the United States for example individuals do not have an official identity card but a Social Security number that has long served as a de facto identification number Taxes are collected on the basis of each citizen s Social Security number and many private institutions use the number to keep track of their employees students and patients Access to an individual s Social Security number affords the opportunity to gather all the documents related to that person s citizenship i e to steal his identity Even stolen credit card information can be used to reconstruct an individual s identity When criminals steal a firm s credit card records they produce two distinct effects First they make off with digital information about individuals that is useful in many ways For example they might use the credit card information to run up huge bills forcing the credit card firms to suffer large losses or they might sell the information to others who can use it in a similar fashion Second they might use individual credit card names and numbers to create new identities for other criminals For example a criminal might contact the issuing bank of a stolen credit card and change the mailing address on the account Next the criminal may get a passport or driver s license with his own picture but with the victim s name With a driver s license the criminal can easily acquire a new Social Security card it is then possible to open bank accounts and receive loans all with the victim s credit record and background The original cardholder might remain unaware of this until the debt is so great that the bank contacts the account holder Only then does the identity theft become visible Although identity theft takes places in many countries researchers and law enforcement officials are plagued by a lack of information and statistics about the crime worldwide Cybercrime is clearly however an international problem In 2015 the U S Bureau of Justice Statistics BJS

released a report on identity theft in the previous year almost 11 million Americans had their identities fraudulently used to open bank credit card or utility accounts The report also stated that another 16.4 million Americans were victimized by account theft such as use of stolen credit cards and automatic teller machine ATM cards The BJS report showed that while the total number of identity theft victims in the United States had grown by about 1 million since 2012 the total loss incurred by individuals had declined since 2012 by about 10 billion to 15.4 billion Most of that decline was from a sharp drop in the number of people losing more than 2,000 Most identity theft involved small sums with losses less than 300 accounting for 54 percent of the total
