Chapter 1 The Starting Point: Understanding the Scientific Method

1. Short answer: Describe characteristics and the role of different members of the termite society.

ANS:

The vast majority of members in a termite colony are wingless, sterile, and blind workers. They are milky white in color and possess hard-chewing mouth parts. Workers look after the eggs and nymphs, feed the soldiers and reproductive forms, build and maintain the colony, and forage for food. The workers are responsible for the telltale signs of termite damage. Soldiers are also wingless, sterile, and blind. This caste has a milky-white body with a yellowish-brown head and prominent mandibles. Soldiers defend the colony, mostly from ants. The reproductives, also called the royal caste, consist of the king and queen. Their only function is to reproduce. The royal caste is dark brown in color and has functional eyes. The queen seems to be striped because the segments of her abdomen are distended. Swarming termites are called alates or swarmers. They are winged reproductives that eventually establish new nests.
