### **Land-based Ecosystems**

Largely preserved in its four nature reserves, namely, Bukit Timah Nature Reserve, Central Catchment Nature Reserve, Sungei Buloh Wetland Reserve, and Labrador Nature Reserve. These are legally protected under the Parks and Trees Act. The most dominant ecosystem is the tropical rainforest.

- **Intertidal areas:** Intertidal areas in Singapore are coastal zones that lie between the high tide and low tide marks, exposed to the air during low tide and submerged underwater during high tide. In Singapore this exposure occurs twice a day due to semi-diurnal tides. These areas include sandy shores, rocky shores and seagrass beds.
- For example, Coastal ecosystems such as those at East Coast Park and Changi Beach feature sandy shores that support various species of crabs, mollusks, and migratory birds.
- **Mangroves:** They are made up of salt-tolerant trees and shrubs that are highly adapted to the harsh conditions of fluctuating tides, high salinity, and saturated soils. They provide shelter and food for marine life and protect coastlines from harsh storms.
- For example, Pasir Ris Park, situated in the eastern part of Singapore, includes a mangrove boardwalk and Sungei Buloh Wetland Reserve which houses the most significant and well-preserved mangrove areas.
- **Coral Reefs:** Mainly found in the Southern Islands of Singapore, including Sisters' Islands Marine Park, and hosts a wide range of marine species, such as corals, fish, and other invertebrates.
