NASA Technical Memorandum ,1991 **The Next Generation of Electric Power Unit Commitment Models**
Benjamin F. Hobbs, Michael H. Rothkopf, Richard P. O'Neill, Hung-po Chao, 2006-04-11 Over the years the electric power industry has been using optimization methods to help them solve the unit commitment problem The result has been savings of tens and perhaps hundreds of millions of dollars in fuel costs Things are changing however Optimization technology is improving and the industry is undergoing radical restructuring Consequently the role of commitment models is changing and the value of the improved solutions that better algorithms might yield is increasing The dual purpose of this book is to explore the technology and needs of the next generation of computer models for aiding unit commitment decisions Because of the unit commitment problem s size and complexity and because of the large economic benefits that could result from its improved solution considerable attention has been devoted to algorithm development in the book More systematic procedures based on a variety of widely researched algorithms have been proposed and tested These techniques have included dynamic programming branch and bound mixed integer programming MIP linear and network programming approaches and Benders decomposition methods among others Recently metaheuristic methods have been tested such as genetic programming and simulated annealing along with expert systems and neural networks Because electric markets are changing rapidly how UC models are solved and what purposes they serve need reconsideration Hence the book brings together people who understand the problem and people who know what improvements in algorithms are really possible The two fold result in *The Next Generation of Electric Power Unit Commitment Models* is an assessment of industry needs and new formulations and computational approaches that promise to make unit commitment models more responsive to those needs

Operation of Restructured Power Systems Kankar Bhattacharya,Math H.J. Bollen,Jaap E. Daalder,2012-12-06 Deregulation is a fairly new paradigm in the electric power industry And just as in the case of other industries where it has been introduced the goal of deregulation is to enhance competition and bring consumers new choices and economic benefits The process has obviously necessitated reformulation of established models of power system operation and control activities Similarly issues such as system reliability control security and power quality in this new environment have come in for scrutiny and debate In this book we attempt to present a comprehensive overview of the deregulation process that has developed till now focussing on the operation aspects As of now restructured electricity markets have been established in various degrees and forms in many countries This book comes at a time when the deregulation process is poised to undergo further rapid advancements It is envisaged that the reader will benefit by way of an enhanced understanding of power system operations in the conventional vertically integrated environment vis a vis the deregulated environment The book is aimed at a wide range of audience electric utility personnel involved in scheduling dispatch grid operations and related activities personnel involved in energy trading businesses and electricity markets institutions involved in energy sector financing Power engineers energy economists researchers in utilities and universities should find the treatment of mathematical models as well as emphasis on recent research work helpful
