K. Shah, 1999 The drive to minimize capital investment and improve the energy efficiency of process industry plants has led to a reassessment of the desirability and practicality of incorporating compact heat exchangers CHEs and heat transfer enhancement technology into process plants This volume collects papers presented at the International Conference on Compact Heat Exchangers for the Process Industries whose objectives were to exploit the existing forms of the CHEs and enhancement technology with their potential use and benefits to identify new forms of the CHEs and enhancement technology and to identify and discuss barriers and critical issues preventing the broader use of CHEs and enhancement technology **Advanced Heat Exchangers** J-M. Buchlin, Léon Bolle, 2002 Process Heat Transfer Sarit K. Das, Sarit Kumar Das, 2005 The present text is aimed at giving the students a substantial feel of the fundamentals of heat transfer applied to process industry Though the introduction of the material is made at the undergraduate level for a first course in Process Heat Transfer it includes enough advanced material for postgraduate courses on Process Heat Transfer or Heat Exchangers The text starts with summary of single phase heat transfer Subsequently classification selection and basic theory of heat transfer equipment are explained Based on this traditional heat exchangers as well as stirred tanks are treated in detail Special emphasis has been laid on plate type heat exchangers The second part introduces two phase heat transfer followed by apparatus dealing with phase change such as condensers evaporators reboilers and cooling towers Finally recent advances in process optimization through pinch technology and energy analysis along with transient response of heat exchangers are introduced The textbook stresses on design approach
Industrial Heat Exchangers Graham Walker, 1982 **Thermal Design of Heat Exchangers: A Numerical Approach**
Eric M. Smith, 1997 This book is unique in adopting a numerical approach to the thermal design of heat exchangers The computation of mean temperature difference with accommodation of longitudinal conduction effects makes full optimisation of the exchanger core possible Sets of three partial differential equations for both contra flow and cross flow are established and form the bases from which a range of methods of direct sizing and stepwise rating may proceed Optimisation of an exchanger for steady state operation is achieved by an approach which allows maximum utilisation of the allowable pressure losses Transient methods are covered including the Method of Characteristics and the Single Blow method of testing is treated Numerous aspects of low and high temperature design are discussed and extensive references to the literature are provided Schematic algorithms are listed to allow students and practitioners to construct their own solutions and spline fitting of data is discussed
