Structural Engineering and Geomechanics - Volume 1 Sashi K. Kunnath, 2020-06-22 An understanding of dynamic effects on structures is critical to minimize losses from earthquakes and other hazards These three books provide an overview of essential topics in structural and geotechnical engineering with an additional focus on related topics in earthquake engineering to enable readers gain such an understanding One of the ultimate objectives of these books is to provide readers with insights into seismic analysis and design However in order to accomplish that objective background material on structural and geotechnical engineering is necessary Hence the first two sections of the book provide this background material followed by selected topics in earthquake engineering The material is organized into three major parts The first section covers topics in structural engineering Beginning with fundamental mechanics of materials the book includes chapters on linear and nonlinear analysis as well as topics on modeling of structures from different perspectives In addition to traditional design of structural systems introductions to important concepts in structural reliability and structural stability are discussed Also covered are subjects of recent interest viz blast and impact effects on structures as well as the use of fiber reinforced polymer composites in structural applications Given the growing interest in urban renewal an interesting chapter on restoration of historic cities is also included The second part of the book covers topics in geotechnical engineering covering both shallow and deep foundations and issues and procedures for geotechnical modeling The final part of the book focuses on earthquake engineering with emphasis on both structures and foundations Here again the material covered includes both traditional seismic design and innovative seismic protection And more importantly concepts in modeling for seismic analysis are highlighted

Selection of Structural Analysis Computer Programs  
L. V. Andrew,I. C. Taig,1979 The use of computerised techniques of structural analysis is now standard in many branches of engineering There is however a wide range of programs available both commercially and within individual organisations These programs differ in their capabilities and in their costs and ease of use The potential user may experience considerable difficulty in selecting a program that is appropriate to his particular class of work The paper by Mr Andrew describes in detail the technical and administrative course of action that has been adopted by a major industrial organization to select and implement programs that are appropriate to its work Mr Taig presents a similar discussion but with perhaps more emphasis on technical issues Papers presented at the 47th Structures and Materials Panel Meeting Florence Italy September 1978

English Within a pretty short term this book saw two editions in Russian The authors received in spiring responses from  
readers that both stimulated our continuing and improving this work and made sure it would not be in vain of us to try to  
multiply our readers by covering the English speaking engineering community When we prepared the present edition we  
took into account interests of the Western readers so we had to make some changes to our text published earlier These  
changes include the following aspects First we excluded a lot of references and discussions regarding Russian engi neering  
codes It seems to us those are of no real interest for Western engineers oriented at Eurocode or national construction design  
regulations
