Anderson,2020-11-25 Now that there s software in everything how can you make anything secure Understand how to engineer dependable systems with this newly updated classic In *Security Engineering A Guide to Building Dependable Distributed Systems* Third Edition Cambridge University professor Ross Anderson updates his classic textbook and teaches readers how to design implement and test systems to withstand both error and attack This book became a best seller in 2001 and helped establish the discipline of security engineering By the second edition in 2008 underground dark markets had let the bad guys specialize and scale up attacks were increasingly on users rather than on technology The book repeated its success by showing how security engineers can focus on usability Now the third edition brings it up to date for 2020 As people now go online from phones more than laptops most servers are in the cloud online advertising drives the Internet and social networks have taken over much human interaction many patterns of crime and abuse are the same but the methods

have evolved Ross Anderson explores what security engineering means in 2020 including How the basic elements of cryptography protocols and access control translate to the new world of phones cloud services social media and the Internet of Things Who the attackers are from nation states and business competitors through criminal gangs to stalkers and playground bullies What they do from phishing and carding through SIM swapping and software exploits to DDoS and fake news Security psychology from privacy through ease of use to deception The economics of security and dependability why companies build vulnerable systems and governments look the other way How dozens of industries went online well or badly How to manage security and safety engineering in a world of agile development from reliability engineering to DevSecOps The third edition of Security Engineering ends with a grand challenge sustainable security As we build ever more software and connectivity into safety critical durable goods like cars and medical devices how do we design systems we can maintain and defend for decades Or will everything in the world need monthly software upgrades and become unsafe once they stop
