workshop on Artificial Life was held at the Los Alamos National Laboratory Jointly sponsored by the Center for Nonlinear
Studies the Santa Fe Institute and Apple Computer Inc the workshop brought together 160 computer scientists biologists
physicists anthropologists and other assorted ists all of whom shared a common interest in the simulation and synthesis of
living systems During five intense days we saw a wide variety of models of living systems including mathematical models for
the origin of life self reproducing automata computer programs using the mechanisms of Darwinian evolution to produce co
adapted ecosystems simulations of flocking birds and schooling fish the growth and development of artificial plants and much
much more The workshop itself grew out of my frustration with the fragmented nature of the literature on biological
modeling and simulation For years I had prowled around libraries shifted through computer search results and haunted
bookstores trying to get an overview of a field which I sensed existed but which did not seem to have any coherence or unity
Instead I literally kept stumbling over interesting work almost by accident often published in obscure journals if published at
all **Artificial Life X** Luis Mateus Rocha,2006 Proceedings from the Tenth International Conference on Artificial Life
marking two decades of interdisciplinary research in this growing scientific community Artificial Life is an interdisciplinary
effort to investigate the fundamental properties of living systems through the simulation and synthesis of life like processes
in artificial media The field brings a powerful set of tools to the study of how high level behavior can arise in systems
governed by simple rules of interaction This tenth volume marks two decades of research in this interdisciplinary scientific
community a period marked by vast advances in the life sciences The field has contributed fundamentally to our
understanding of life itself through computer models and has led to novel solutions to complex real world problems from
disease prevention to stock market prediction across high technology and human society The proceedings of the biennial A
life conference which has grown over the years from a small workshop in Santa Fe to a major international meeting reflect
the increasing importance of the work to all areas of contemporary science Visual Information Systems Clement

informationsystems The chapters presented are a selection of thoroughly refereed and revised full papers first presented at

the First International Conference on visual Information Systems held in February 1996 Next generation information systems have a high visual content and there will be a shift in emphasis from a paradigm of predominantly alphanumeric data processing to one of visual information processing The book provides a detailed introductory chapter two keynotes by leading authorities sections on design and architecture database management and modelling content based search and retrieval feature extraction and indexing query model and interface and object recognition and content organization
