### ABSTRACT

Lean manufacturing is an applied methodology of scientific, objective techniques that cause work tasks in a process to be performed with a minimum of non-value adding activities resulting in greatly reduced wait time, queue time, move time, administrative time, and other delays. This work addresses the implementation of lean principles in a construction equipment company. The prime objective is to evolve and test several strategies to eliminate waste on the shop floor. This paper describes an application of value stream mapping (VSM). Consequently, the present and future states of value stream maps are constructed to improve the production process by identifying waste and its sources. A noticeable reduction in cycle time and increase in cycle efficiency is confirmed. The production flow was optimized thus minimizing several non-value added activities/times such as bottlenecking time, waiting time, material handling time, etc. This case study can be useful in developing a more generic approach to design lean environment.

Business economics Business Management Corporate Governance grade 1 University of Applied Sciences Burgenland Department Information Technology and Information Management language English abstract An increasing competitive market in service businesses is driving multinational corporations MNCs to implement business improvement philosophies and methodologies in order to address customer requirements for better quality service and organizational demands for rising profit margins through cost reduction The Information Technology Infrastructure Library ITIL has been implemented by various MNCs in full or as per business requirements in order to manage and control their processes more effectively However due to dynamic economic influences in recent years these companies require to step up in their ability to become more agile and continuously improve their processes in order to react in an agile way to shifting market demands Although ITIL stands for a framework of best practices it neglects a clear customer value proposition and provides only limited significance towards change Lean on the other hand is a management methodology that has been suggested as a means to resolve these problems by reducing costs increase productivity and becoming more agile within daily business routines Lean s application within ITIL is becoming progressively popular among researchers but despite the application of Lean approaches to different contexts within manufacturing industries the specifics of Information Technology Service Management ITSM in the services industries remains largely untested Focus of this study is worldwide the service delivery industry of MNCs which present complex process driven industries The aim is to determine in which relation or what kind of potential there is for a hybrid ITIL seven step improvement process and Lean model in order to accomplish a more agile continual service improvement approach
