

Unit - 1

Cross Compiler: It is a type of compiler that generates machine code targeted to run on a system, different than the one generating it.

eg. A compiler that runs on a windows platform also generates a code that runs on a linux platform is a cross compiler.

Process of creating executable code for different machines is called "retargetting".

Cross compiler is also k/a "retargetable compiler".

GNU Gcc is an example of cross compiler.

context the exploitation of domain specific structural information is a driving issue in advancing practical AD tool and algorithm development This trend is prominently reflected in many of the publications in this volume not only in a better understanding of the interplay of AD and certain mathematical paradigms but in particular in the use of hierarchical AD approaches that judiciously employ general AD techniques in application specific algorithmic harnesses In this context the understanding of structures such as sparsity of derivatives or generalizations of this concept like scarcity plays a critical role in particular for higher derivative computations
