in Reconfigurable Mechanisms and Robots I Jian S Dai, Matteo Zoppi, Xianwen Kong, 2012-06-13 Advances in Reconfigurable Mechanisms and Robots I provides a selection of key papers presented in The Second ASME IFToMM International Conference on Reconfigurable Mechanisms and Robots ReMAR 2012 held on 9th-11th July 2012 in Tianjin, China. This ongoing series of conferences will be covered in this ongoing collection of books. A total of seventy-eight papers are divided into seven parts to cover the topology, kinematics, and design of reconfigurable mechanisms with the reconfiguration theory, analysis, and synthesis, and present the current research and development in the field of reconfigurable mechanisms, including reconfigurable parallel mechanisms. In this aspect, the recent study and development of reconfigurable robots are further presented with the analysis and design and with their control and development. The bio-inspired mechanisms and subsequent reconfiguration are explored in the challenging fields of rehabilitation and minimally invasive surgery. Advances in Reconfigurable Mechanisms and Robots I further extends the study to deployable mechanisms and foldable devices and introduces applications of reconfigurable mechanisms and robots. The rich content of Advances in Reconfigurable Mechanisms and Robots I brings together new developments in reconfigurable mechanisms and robots and presents a new horizon for future development in the field of reconfigurable mechanisms and robots.

Sun Tracking and Solar Renewable Energy Harvesting Gerro Prinsloo, Robert Dobson, 2015-11-02 Free to download eBook on Practical Solar Tracking Design. Solar Tracking, Sun Tracking, Sun Tracker, Solar Tracker, Follow Sun, Sun Position calculation, Azimuth, Elevation, Zenith, Sun following, Sunrise, Sunset, Moon phase, Moonrise, Moonset calculators. In harnessing power from the sun through a solar tracker or solar tracking system, renewable energy system developers require automatic solar tracking software and solar position algorithms. On-axis sun tracking systems such as the altitude/azimuth, dual-axis, or multi-axis solar tracker systems use a sun tracking algorithm or ray tracing sensors or software to ensure the sun's passage through the sky is traced with high precision. In automated solar tracker applications, right through summer solstice, solar equinox, and winter solstice, Eco-Friendly and Environmentally Sustainable Micro Combined Solar Heat and Power (mCHP), mCCHP, mCHCP with Microgrid Storage and Layered Smartgrid Control towards Supplying Off-Grid Rural Villages in developing BRICS countries such as Africa, India, China, and Brazil. Off-grid rural villages and isolated islands areas require mCHP and trigeneration solar power plants and associated isolated smart microgrid solutions to serve the community energy needs. This article describes the development progress for such a system, also referred to as solar polygeneration. The system includes a sun tracker mechanism wherein a parabolic dish or lenses are guided by a light-sensitive mechanism in a way that the solar receiver is always at right angle to the solar radiation. Solar thermal energy is then either converted into electrical energy through a free-piston Stirling or stored in a thermal storage container. The project includes the thermodynamic modeling of the plant in Matlab Simulink as well as the development of an intelligent control approach that includes smart microgrid distribution and optimization. The book includes aspects in the simulation and optimization of stand-alone hybrid

renewable energy systems and co generation in isolated or islanded microgrids It focusses on the stepwise development of a hybrid solar driven micro combined cooling heating and power mCCHP compact trigeneration polygeneration and thermal energy storage TES system with intelligent weather prediction weak ahead scheduling time horizon and look ahead dispatch on integrated smart microgrid distribution principles The solar harvesting and solar thermodynamic system includes an automatic sun tracking platform based on a PLC controlled mechatronic sun tracking system that follows the sun progressing across the sky An intelligent energy management and adaptive learning control optimization approach is proposed for autonomous off grid remote power applications both for thermodynamic optimization and smart micro grid optimization for distributed energy resources DER The correct resolution of this load following multi objective optimization problem is a complex task because of the high number and multi dimensional variables the cross correlation and interdependency between the energy streams as well as the non linearity in the performance of some of the system components Exergy based control approaches for smartgrid topologies are considered in terms of the intelligence behind the safe and reliable operation of a microgrid in an automated system that can manage energy flow in electrical as well as thermal energy systems The standalone micro grid solution would be suitable for a rural village intelligent building district energy system campus power shopping mall centre isolated network eco estate or remote island application setting where self generation and decentralized energy system concepts play a role Discrete digital simulation models for the thermodynamic and active demand side management systems with digital smartgrid control unit to optimize the system energy management is currently under development Parametric simulation models for this trigeneration system polygeneration poligeneration quadgeneration are developed on the Matlab Simulink and TrnSys platforms In terms of model predictive coding strategies the automation controller will perform multi objective cost optimization for energy management on a microgrid level by managing the generation and storage of electrical heat and cooling energies in layers Each layer has its own set of smart microgrid priorities associated with user demand side cycle predictions Mixed Integer Linear Programming and Neural network algorithms are being modeled to perform Multi Objective Control optimization as potential optimization and adaptive learning techniques

FUNDAMENTALS OF ROBOT VISION

Dr. Jagadeesh Kumar, 2024-12-18 Vision is the ability to see and recognize objects by collecting the light reflected of these
objects into an image and processing that image Robot vision makes use of computers or other electronic hardware to
analyze visual images and recognize objects of importance in the current application of the robots Digital image is an array of
pixels that has been digitized into the memory of a computer A binary number is stored in each pixel to represent the
intensity and possibly the wavelength of the light falling on the part of the image Robot vision is the system including
different methods for processing analyzing and understanding the visuals interpreted by a robot All these methods produce
information that is translated into decisions for robots From start to capture images and to the final decision of the robot a
wide range of technologies and algorithms are used like a committee of filtering and decisions A Robot vision system has to
make the distinction between objects and in almost all cases has to tracking these objects Applied in the real world for Robot
applications these vision systems are designed to duplicate the capabilities of the human vision system using programming
code and electronic parts As human eyes can detect and track many objects in the same time Robot vision systems seem to
pass the difficulty in detecting and tracking many objects at the same time A Robot system finds its place in many fields from
industry and Robot services Even is used for identification or navigation these systems are under continuing advances with
new features like 3D support filtering or detection of light intensity applied to an object Applications and benefits for Robot
vision systems used in industry or for service robots includes
