Modern Compiler Implementation in Java Andrew W. Appel, 2002-10-21 This textbook describes all phases of a compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as the compilation of functional and object oriented languages that is missing from most books The most accepted and successful techniques are described concisely rather than as an exhaustive catalog of every possible variant and illustrated with actual Java classes This second edition has been extensively rewritten to include more discussion of Java and object oriented programming concepts such as visitor patterns A unique feature is the newly redesigned compiler project in Java for a subset of Java itself The project includes both front end and back end phases so that students can build a complete working compiler in one semester

Modern Compiler Design Dick Grune, Kees van

Reeuwijk, Henri E. Bal, Cerial J.H. Jacobs, Koen Langendoen, 2012-07-20 Modern Compiler Design makes the topic of compiler design more accessible by focusing on principles and techniques of wide application By carefully distinguishing between the essential material that has a high chance of being useful and the incidental material that will be of benefit only in exceptional cases much useful information was packed in this comprehensive volume The student who has finished this book can expect to understand the workings of and add to a language processor for each of the modern paradigms and be able to read the literature on how to proceed The first provides a firm basis the second potential for growth
