*Updating to Remain the Same* Wendy Hui Kyong Chun,2016-05-27 What it means when media moves from the new to the habitual when our bodies become archives of supposedly obsolescent media streaming updating sharing saving New media we are told exist at the bleeding edge of obsolescence We thus forever try to catch up updating to remain the same Meanwhile analytic creative and commercial efforts focus exclusively on the next big

thing figuring out what will spread and who will spread it the fastest But what do we miss in this constant push to the future In Updating to Remain the Same Wendy Hui Kyong Chun suggests another approach arguing that our media matter most when they seem not to matter at all when they have moved from new to habitual Smart phones for example no longer amaze but they increasingly structure and monitor our lives Through habits Chun says new media become embedded in our lives indeed we become our machines we stream update capture upload link save trash and troll Chun links habits to the rise of networks as the defining concept of our era Networks have been central to the emergence of neoliberalism replacing society with groupings of individuals and connectable YOUS For isn t new media actually NYOU media Habit is central to the inversion of privacy and publicity that drives neoliberalism and networks Why do we view our networked devices as personal when they are so chatty and promiscuous What would happen Chun asks if rather than pushing for privacy that is no privacy we demanded public rights the right to be exposed to take risks and to be in public and not be attacked **Data-centric**

**Living** V. Sridhar,2021-11-29 This book explores how data about our everyday online behaviour are collected and how they are processed in various ways by algorithms powered by Artificial Intelligence AI and Machine Learning ML The book investigates the socioeconomic effects of these technologies and the evolving regulatory landscape that is aiming to nurture the positive effects of these technology evolutions while at the same time curbing possible negative practices The volume scrutinizes growing concerns on how algorithmic decisions can sometimes be biased and discriminative how autonomous systems can possibly disrupt and impact the labour markets resulting in job losses in several traditional sectors while creating unprecedented opportunities in others the rapid evolution of social media that can be addictive at times resulting in associated mental health issues and the way digital Identities are evolving around the world and their impact on provisioning of government services The book also provides an in depth understanding of regulations around the world to protect privacy of data subjects in the online world a glimpse of how data is used as a digital public good in combating Covid pandemic and how ethical standards in autonomous systems are evolving in the digital world A timely intervention in this fast evolving field this book will be useful for scholars and researchers of digital humanities business and management internet studies data sciences political studies urban sociology law media and cultural studies sociology cultural anthropology and science and technology studies It will also be of immense interest to the general readers seeking insights on daily digital lives

**Computational Network Science** Henry Hexmoor, 2014-09-23 The emerging field of network science represents a new style of research that can unify such traditionally diverse fields as sociology economics physics biology and computer science It is a powerful tool in analyzing both natural and man made systems using the relationships between players within these networks and between the networks themselves to gain insight into the nature of each field Until now studies in network science have been focused on particular relationships that require varied and sometimes incompatible datasets which has kept it from being a truly universal discipline Computational Network Science seeks to unify the methods used to analyze these diverse fields This book provides an introduction to the field of Network Science and provides the groundwork for a computational algorithm based approach to network and system analysis in a new and important way This new approach would remove the need for tedious human based analysis of different datasets and help researchers spend more time on the qualitative aspects of network science research Demystifies media hype regarding Network Science and serves as a fast paced introduction to state of the art concepts and systems related to network science Comprehensive

coverage of Network Science algorithms methodologies and common problems Includes references to formative and updated developments in the field Coverage spans mathematical sociology economics political science and biological networks
