

# Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of Cooling and Plant Professionals at Design/Construction stages. I also used several other sources for additional material, such as Part II course book at Cambridge on Cooling Theory and Thermodynamic gas by Professor John Moran, and the text book on Part II at Cambridge that is Subsonic/Transonic/Supersonic intake gases by Professor Ian Glass. I also included some more recent literature such as Applied Maths for the Plant Professional. The last sentence of the notes is based on Hugh Stanton's course notes, "Single-Phase Cooling".

All numbers by these notes are my best!
