Roach, 2020-01-07 An authoritative overview of the concepts and applications of biological demography This book provides a comprehensive introduction to biodemography an exciting interdisciplinary field that unites the natural science of biology with the social science of human demography Biodemography is an essential resource for demographers epidemiologists gerontologists and health professionals as well as ecologists population biologists entomologists and conservation biologists This accessible and innovative book is also ideal for the classroom James Carey and Deborah Roach cover everything from baseline demographic concepts to biodemographic applications and present models and equations in discrete rather than continuous form to enhance mathematical accessibility They use a wealth of real world examples that draw from data sets on both human and nonhuman species and offer an interdisciplinary approach to demography like no other with topics ranging from kinship theory and family demography to reliability engineering tort law and demographic disasters such as the Titanic and the destruction of Napoleon's Grande Armée Provides the first synthesis of demography and biology Covers baseline demographic models and concepts such as Lexis diagrams mortality fecundity and population theory Features in depth discussions of biodemographic applications like harvesting theory and mark recapture Draws from data sets on species ranging from fruit flies and plants to elephants and humans Uses a uniquely interdisciplinary approach to demography bringing together a diverse range of concepts models and applications Includes informative biodemographic shorts appendixes on data visualization and management and more than 150 illustrations of models and equations

**Life Insurance Mathematics** Hans U. Gerber, 2013-03-09 Halley's Comet has been prominently displayed in many newspapers during the last few months For the first time in 76 years it appeared this winter the nocturnal sky This is an appropriate occasion to clearly visible against point out the fact that Sir Edmund Halley also constructed the world's first life table in 1693 thus creating the scientific foundation of life insurance Halley's life table and its successors were viewed as deterministic laws i.e. the number of deaths in any given group and year was considered to be a well defined number that could be calculated by means of a life

table However in reality this number is random Thus any mathematical treatment of life insurance will have to rely more and more on probability theory By sponsoring this monograph the Swiss Association of Actuaries wishes to support the modern probabilistic view of life contingencies We are fortunate that Professor Gerber an internationally renowned expert has assumed the task of writing the monograph We thank the Springer Verlag and hope that this monograph will be the first in a successful series of actuarial texts Zurich March 1986 Hans Bihlmann President Swiss Association of Actuaries Preface Two major developments have influenced the environment of actuarial mathematics One is the arrival of powerful and affordable computers the once important problem of numerical calculation has become almost trivial in many instances *Statistical Theory and Method Abstracts* ,2000 **Catalog of Copyright Entries.
