**Computational Science and Computational Intelligence** Hamid R. Arabnia, Leonidas Deligiannidis, Farzan Shenavarmasouleh, Soheyla Amirian, Farid Ghareh Mohammadi, 2025-08-09 This CCIS book constitutes selected papers accepted in the Research Track on Smart Cities and Smart Mobility and the Research Track on Software Engineering of the 11th International Conference on Computational Science and Computational Intelligence CSCI 2024 which took place in Las Vegas NV USA during December 11-13 2024 The Research Track on Smart Cities and Smart Mobility CSCI RTSC received 75 submissions of which 15 papers were accepted For the Research Track on Software Engineering CSCI RTSE 13 papers were accepted from 58 submissions 12 of these are included in this volume They were organized in topical sections on Infrastructures Smart Cities Tools and Utilities Smart Cities and Smart Mobility Software Engineering and ongoing research projects Energy Efficiency in Manufacturing Systems Sebastian Thiede, 2012-04-23 Energy consumption is of great interest to manufacturing companies Beyond considering individual processes and machines the perspective on process chains and factories as a whole holds major potentials for energy efficiency improvements To exploit these potentials dynamic interactions of different processes as well as auxiliary equipment e.g. compressed air generation need to be taken into account In addition planning and controlling manufacturing systems require balancing technical economic and environmental objectives Therefore an innovative and comprehensive methodology with a generic energy flow oriented manufacturing simulation environment as a core element is developed and embedded into a step by step application cycle The concept is applied in its entirety to a wide range of case studies such as aluminium die casting weaving mills and printed circuit board assembly in order to demonstrate the broad applicability and the benefits that can be achieved

**Multifaceted Modelling and Discrete Event Simulation** Bernard P. Zeigler, 1984 *Discrete Event Simulation* Udo W. Pooch, James A. Wall, 2024-11-01 Discrete Event Simulation is a process oriented text reference that utilizes an eleven step model to

represent the simulation process from problem formulation to implementation and documentation The book presents the necessary level of detail required to fully develop a model that produces meaningful results and considers the tools necessary to interpret those results Sufficient background information is provided so that the underlying concepts of simulation are understood Major topics covered in Discrete Event Simulation include probability and distributional theory statistical estimation and inference the generation of random variates verification and validation techniques time management methods experimental design and programming language considerations The book also examines distributed simulation and issues related to distributing the physical process over a network of tightly coupled processors Topics covered in this area include deadlock synchronization rollback event management and communication processes Fully worked examples and numerous practical exercises have been drawn from the engineering disciplines and computer science although they have been structured so that they will be useful as well to other disciplines such as economics business administration and management science The presentation of techniques and methods in Discrete Event Simulation make it an ideal text reference for all practitioners of discrete event simulation

Parallel and Distributed Discrete Event Simulation Carl Tropper,2002 Discrete event simulation has long been an integral part of the design process of complex engineering systems and the modelling of natural phenomena Many of the systems that we seek to understand or control can be modelled as digital systems In a digital model we view the system at discrete instants of time in effect taking snapshots of the system at these instants For example in a computer network simulation an event can be the sending of a message from one node to another node while in a VLSI logic simulation the arrival of a signal at a gate may be viewed as an event Digital systems such as computer systems are naturally susceptible to this approach However a variety of other systems may also be modelled this way These include transportation systems such as air traffic control systems epidemiological models such as the spreading of a virus and military war gaming models This book is representative of the advances in this field
