Mathematical Models in Biology Leah Edelstein-Keshet, 1988-01-01 Mathematical Models in Biology is an introductory book for readers interested in biological applications of mathematics and modeling in biology A favorite in the mathematical biology community it shows how relatively simple mathematics can be applied to a variety of models to draw interesting conclusions Connections are made between diverse biological examples linked by common mathematical themes A variety of discrete and continuous ordinary and partial differential equation models are explored Although great advances have taken place in many of the topics covered the simple lessons contained in this book are still important and informative Audience the book does not assume too much background knowledge essentially some calculus and high school algebra It was originally written with third and fourth year undergraduate mathematical biology majors in mind however it was picked up by beginning graduate students as well as researchers in math and some in biology who wanted to learn about this field

Trenk,2004-02-12 The study of algorithmic graph theory and structured families of graphs is an important branch of discrete mathematics It finds numerous applications from data transmission through networks to efficiently scheduling aircraft and crews as well as contributing to breakthroughs in genetic analysis and studies of the brain Especially important have been the theory and applications of new intersection graph models such as generalizations of permutation graphs and interval graphs One of these is the study of tolerance graphs and tolerance orders This book contains the first thorough study of tolerance graphs and related topics indeed the authors have included proofs of major results previously unpublished in book form It will act as a springboard for researchers and especially graduate students to pursue new directions of investigation With many examples and exercises it is also suitable for use as the text for a graduate course in graph theory *BioMath in the Schools* Margaret B. Cozzens,Fred S. Roberts,2011 Even though contemporary biology and mathematics are inextricably linked high school biology and mathematics courses have traditionally been taught in isolation But this is beginning to change This volume presents papers related to the integration of biology and mathematics in high school classes The first part of the book provides the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so The second part explores the development and integration of curricular materials and includes responses from teachers Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology The last paper in the book discusses what works and what doesn't and presents positive responses from students to the integration of mathematics and biology in their classes **Case Studies in Applied Mathematics** Mathematical Association of America.
